WEST BENGAL SECRETARIAT LIBRARY

4/102

REPORT

ON

FOREST ADMINISTRATION IN THE NORTHERN CIRCLE

OF THE

CENTRAL PROVINCES.

For the year 1894-95

INTRODUCTION.

The forest-year 1894-95 is one in which the most noticeable feature is again the short revenue from grazing.

2. There is little to add to the causes, already dwelt upon in the report for the year 1893-94, as being productive of short receipts, except it be to emphasize the fact that the total failure of both the spring and autumn crops in the Nerbudda Valley has, for the time being, demoralized forest finances. The Administration has found it necessary to throw open the Government Forests in the Saugor, Damoh and Narsinghpur Districts to the free grazing of cattle, and, including the Jubbulpore District, to the free removal of all kinds of edible forest produce, as well as of grass and fuel, to the starving people, thereby to eke out a living for themselves. Forest revenue, since the year 1893, in every Division in this Circle, with the exception of Nimar, has been injuriously affected by the prevailing distress which is due to a succession of failing crops; to the outbreak of cattle disease; and to severe outbreaks of epidemic cholera and small-pox, both of which diseases appeared in most districts in this Circle.

3. The following quotation from paragraph 2 of the Chief Commissioner's Resolution No. 3443, dated the 7th August 1895, on the Report on the Stamp Revenue of the Central Provinces, should also find a place in the opening pages of this Forest Report:—

"Before, however, any analysis of the marked features of the year's figures can be attempted, it is necessary to state that the year to which the present returns relate was in every respect an exceptional one. The wheat harvest of 1894 in the Northern districts of Saugor and Damoh was a total failure; in Jubbulpore and in the Nerbudda Valley it was extremely poor; in the Nagpur country wheat and linseed yielded returns much below the average, the outturn of cotton was very small for the third time in succession, and till once again failed. The only parts of the Provinces in which the conditions of the year could be at all classed as normal were Chhattisgarh, Nimar and the Satpura Districts.

"The spring harvest of 1895 have been almost equally bad, and in some districts worse; and the linseed crop has entirely failed."

CHAPTER I.

EXTENSION AND CONSTITUTION OF STATE FORESTS.

I.—Alteration of Areas.

4. The alteration in area of reserved forests is as follows:—

Class.	At commencement of year.	Changes during the year.		At close of the year.
		Added.	Excluded.	
	Acres.	Acres.	Acres.	Acres.
Reserved Forests	6,435,602	...	1,772	6,433,920
Unclassed State Forests	13,343	..	...	13,343
Total ...	6,449,035	...	1,772	6,447,263

The change is due to the disforestation of 1,772 acres.

From the Mandla Division were excluded 750 acres given in exchange for an equal area obtained from Bikaji Naik, Malguzar of Kesli. The area so obtained in exchange was reserved under Notification No. 2462, dated the 24th May 1894 (see paragraph 5 of Forest Report for 1893-94): while the area disforested was under the authority of Notification No. 2419, dated the 22nd May 1895. In the Jubbulpore Division 522·78 acres were disforested under Notification No. 2737, dated the 18th June 1895, and the land was given out by the Agricultural Department on lease to the Malguzar of Mohgawan. The Saugor Division lost 498·99 acres by re-alignment of forest boundaries which, in the first instance, had been laid in close proximity to the homesteads in the villages concerned. The land so excluded from forests has been added to the areas of the villages. The details are as follows:—

40·22 acres to Rangir, from Rangir Reserve, by Notification No. 3532, dated the 9th August 1894.

12·10 acres to Chitoli, from Chitoli Block, Ranipura Reserve, by Notification No. 3543, dated the 9th August 1894.

16·66 acres to Bodha Piparia, from the Abchand Block, by Notification No. 5258, dated the 29th November 1894.

18·29 acres to Maswasa, from Ranipura Reserve, by Notification No. 2421, dated the 22nd May 1895.

24·5 acres to Sondni, from Sondni Reserve, by Notification No. 2755, dated the 20th June 1895.

141·54 acres to Chowka, from Patrikota Sub-Range, by Notification No. 3403, dated the 2nd August 1894.

10·82 acres to Bilaspur, from Bilaspur Reserve, by Notification No. 3868, dated the 28th August 1894.

112·45 acres to Malthone, from Malthone Reserve, by Notification No. 1954, dated the 23rd April 1895.

7·38 acres to Bhulna Bhangarh, from Rahatgarh Reserve, by Notification No. 1956, dated the 23rd April 1895.

20·20 acres to Jasraj, from Saugor Hills, by Notification No. 2163, dated the 6th May 1895.

18·73 acres to Naigawan, from Buleh Sub-Range, by Notification No. 2165, dated the 6th May 1895.

31·10 acres to Rasulpore, from Rasulpore Reserve, by Notification No. 2296, dated the 15th May 1895.

25·0 acres to Kalipathar, from Kalipathar Reserve, by Notification No. 2298, dated the 15th May 1895.

12·0 acres to Sukha, from Sukha Reserve, by Notification No. 2307, dated the 15th May 1895.

8·0 acres to Patan, from Patan Reserve, by Notification No. 1958, dated the 23rd April 1895.

There were no other alterations in area made during the year.

5. There is nothing to add to the table showing progress made in the classification of forests, which will be found at paragraph 6 of the report for 1893-94, because since the receipt of the orders promulgated in Chief Commissioner's Resolution No. 519, dated the 25th January 1895, and which have superseded the previous orders on the subject, the only proposals put forward as yet have come from Hoshangabad. These will shortly be submitted for orders.

6. The explanation of work attempted—but not yet accomplished—under the orders now rendered obsolete contained in Resolution No. 6505—382, dated the 8th November 1888, and to which reference was made in paragraphs 6 and 7 of the report for 1893-94, is as follows:—

Mandla Division.—The proposal to disforest 487,757 acres is held in abeyance under paragraph 11 of Chief Commissioner's Resolution No. 519, dated the 25th January 1895. The proposal to transfer from Class B-II to Class A 1,080,512 acres is also held in abeyance, pending the further action about to be taken on the Resolution in question.

Jubbulpore Division.—The proposal to transfer from Class B-II to Class A 173,552 acres was sent to the Commissioner of Settlements and Agriculture

with Conservator's No. G-445—265, dated the 7th August 1894. But no action has as yet been taken on this reference by that officer.

Damoh Division.—A similar proposal was made involving the transfer of 604,911 acres, and dealt with in Conservator's letter No. 453—268, dated the 8th August 1894, to the address of the Commissioner of the Jubbulpore Division, is still pending, as the question is held in abeyance subject to the further report of the Settlement Department on the areas actually selected for disforestation.

Saugor Division.—A similar proposal involving the transfer of 436,515 acres stands over for the present until it is known what further action will be taken on the Deputy Commissioner's report * on the Resolution of the 25th January last.

*No. 742, dated the 4th March 1895.

Hoshangabad Division.—An application to disforest the Charwa tract and the Police Abadi villages was submitted with Conservator's No. S-375—173, dated the 30th November 1894, to the Secretary to the Chief Commissioner; orders disforesting the areas have only just been notified.

There were two sets of proposals submitted to the Conservator by the Divisional Forest Officer, Hoshangabad, and which are discussed at page 5 of the Forest Report for 1893-94.

These proposals were examined by the Conservator. The one relating to the transfer from Class B-II to Class A of—

(1) Malni Block,
(2) Nandwara Block,
(3) Kesla Block, and
(4) Denwa Nagdwara Block,

was found to be defective and was therefore held in abeyance until the proposal could be reconsidered by the Settlement and the Forest Officer jointly. This has been done with reference to two out of the four blocks.

The second proposal related to the Seoni Range, and was submitted for the orders of the Chief Commissioner, and the transfer of the whole of the Class B-II forests in the Seoni Range to Class A, with some little modification of the original proposal, was sanctioned in Secretariat letter No. 3001, dated the 10th July 1895. The further details of this transfer will, however, appear in a future report.

7. Referring to letter No. 733—60-2, dated the 9th July 1895, from the Government of India, Revenue and Agricultural Department, reviewing the Forest Report for 1893-94, the following points noticed in that review require to be explained here.

It is true that the orders of the Chief Commissioner sanctioned, in the orders quoted in the review, the determination, in a general way, of the tracts in the Hoshangabad Division in which there was scope for the selection and ultimate disforestation of land in favour of agricultural requirements; but no steps could be taken at the time to classify the area until the land had, plot by plot, been carefully examined, marked off and actually surveyed. This work took time to accomplish, and was only completed, as regards the Harda-Charwa tract (exclusive of the Police Abadi villages) in the year 1893-94; and only then had it become possible to classify the land with any accuracy. This will be obvious when it is shown that the approximate area originally determined upon for operation was 101½ square miles, while the area actually selected and taken up under Ryotwari is 194 square miles; but if to this be now added the Police Abadi villages, occupying 22 square miles, the total area classified as Class B-I will be 216 square miles as against 101½ square miles originally proposed as the approximate area in which selection of land for agriculture was permissible. It will thus be seen the futility of classifying areas on the approximate data furnished, in the first instance, jointly by the Agricultural and Forest Departments. It is also true that classification, in the usual general way, was completed on paper for the Nimar Division in 1890-91. But the actual separation by actual boundaries laid down on the ground of the land so determined upon, was not completed till the year 1893-94. Hence the remarks by the Conservator at paragraph 7 of the report for that year, namely, that classification had been completed in Nimar.

The note which would have explained why the reversion to Class B-II of 8,533 acres, previously shown as Class B-I in the Jubbulpore Division, was, unfortunately, omitted from the remark column of Annual Form No. 46.

The explanation is simple, and is based on the following consideration:— In Resolution No. $\frac{804}{1-22\cdot9}$, dated the 12th March 1892, the Chief Commissioner directed that certain lands were to be taken up for Settlement in the Dhanwahie Pargana (under the administrative control of the Jubbulpore Divisional Forest Officer) of the Mandla District. The classification under Class B-I was accordingly made, based on the information supplied by the Revenue and Agricultural Department in list A of the Resolution. It was, however, subsequently reported that a large portion of the land thus classified as Class B-I was absolutely unfit for permanent cultivation, and other land which was considered to be of the required quality was accordingly taken up instead. This action of the Revenue and Agricultural Department, therefore, rendered a reversion to Class B-II of the area previously shown as transferred to Class B-I as becoming absolutely necessary.

II.—Forest Settlements.

8. Forest Settlement in regard to 5·75 acres in the Jullundhar Reserve, of the Saugor Division, was in progress during the year. No other areas were being brought under Settlement during the year.

III.—Demarcation.

9. Some new work has been thrown on the Forest Department by the orders communicated in Chief Commissioner's Resolution No. 519, dated the 25th January 1895, as by those orders the demarcation of the boundaries of land taken up for Ryotwari Settlements, and the re-alignment of existing boundaries, where these are in close proximity to village homesteads, be undertaken by the Forest Department.

A considerable amount of work, both ordinary and extraordinary, was done during the year, of which the details are as follows:—

	Miles.
(*a*) Demarcated during the year, new ...	59
(*b*) Up keep during the year, old ...	9,792
(*c*) In good condition during the year ...	606
Total ...	10,457
(*d*) Not demarcated during the year ...	47
(*e*) Not requiring artificial demarcation ...	1,133
Total ...	1,180
Grand Total ...	11,637

Cost—	Rs.
New work	1,123
Old work	4,457
Total ...	5,580

Mandla Division.—Demarcating new boundaries is still in progress. There still remains a considerable amount of new work to be done in the Dindori Range.

Jubbulpore Division.—New boundary marks are required and which are in course of being put up. A large area selected for Ryotwari Settlement requires new boundaries in the Dhanwahie Range.

Damoh Division.—New work is in progress in marking off land for Ryotwari. A large number of old marks require to be replaced with others more substantially built. This is now being carried through.

Saugor Division.—The work is complete as regards existing boundaries: but is still in progress as regards throwing back where the boundaries are in too close proximity to the homesteads of villagers.

Narsinghpur Division.—Existing boundaries were maintained in good repair.

Hoshangabad Division.—Existing boundaries have been maintained.

Betul Division.—Considerable work was done during the year in clearing boundary lines, replacing existing marks with others more substantially built, and in general maintenance. The work that still remains to be done is reported to be the painting of distinguishing numbers on the marks newly set up.

Nimar Division.—A large quantity of good work was done during the year in the upkeep and maintenance of existing boundaries and marks. The forest boundaries in the Burhanpur Range are still unsatisfactory, but proper measures are being taken to clear the lines and replace existing marks with others more substantially built.

10. It will thus be seen that the work of compiling boundary registers is therefore still in progress in all Divisions, owing to the new demarcation requiring to be made.

Mandla Division.—Much work still remains to be done in completing registers for the new boundaries required by the exclusion of land for Ryotwari Settlements. The work done during the year comprised 50 miles of boundary and 235 marks. This completes old work.

Jubbulpore Division.—Work was completed during the year in so far as regards existing boundaries, but is still wanting in completion for the Ryotwari tracts.

Damoh Division.—Considerable progress is reported in the preparation of registers. Much work, however, still remains to be done owing to the defective nature of the previous work. Registers were completed for five forest blocks in the Central Range of an aggregate area of 87,872 acres.

Hoshangabad Division.—The work is still very much incomplete, since practically nothing has yet been done to comply with standing orders on the subject. See remarks in previous Forest Reports.

Betul Division.—The work is now reported as complete—1,325 miles of boundary and 11,093 marks.

Nimar Division.—Registers for boundary—miles 347 and marks 1,701—have been completed. There remains a considerable length of boundary, however, still to be dealt with, as a large number of the old marks require to be renewed and renumbered.

IV.—Surveys.

11. Operations were in progress during the year in the Nimar and Betul Divisions under the direction of Colonel Wilmer, Deputy Superintendent, Survey of India; and in Narsinghpur and Saugor under the direction of Mr. Reynolds, Superintendent, Forest Survey Branch.

The details of work completed will be seen as follows.

Report by Mr. W. H. Reynolds, Superintendent, Forest Surveys :—

"During the field season of 1894-95, or between the 1st October 1894 to 30th June 1895, survey operations by the Imperial Forest Survey Branch, under the direction of Mr. W. H. Reynolds, Superintendent of Forest Surveys, were carried on in the districts of Narsinghpur and Saugor. The detachment, under the charge of Mr. T. S. Marten, took the field in the middle of November, and commenced work towards the end of the month, and closed work by the middle of June.

"The following statement shows the areas surveyed :—

Name of District.	Triangulation (square miles).	Detail survey (in square miles).		Boundary survey on the 16" scale (linear).
		4"	16"	
Narsinghpur	250	106	31	253
Saugor	...	30	17	134
Total ...	250	136	48	387
		186		

"For all areas surveyed on the 4-inch scale, a record was prepared for the forest distribution and the classification of soils, and 30 linear miles of check surveys were run throughout the areas surveyed in addition to running instrumental contours at 250 feet vertical intervals.

"The survey of the Narsinghpur forests has been completed, and the detachment will continue work in the Saugor District during the next field season. As the survey year does not close until the 30th September, it is not possible to give the cost rates of the work for the forest year as the mapping and computation charges for the survey year will have to be added before the rates can be deduced.

"The cost rate for the survey year ending the 30th September 1894 was Rs. 54 per square mile, *vide* paragraph 46 of the Annual Progress Report of the Forest Survey Branch for the year 1893-94.

"*Map Drawing.*—Besides the publication of the 4-inch Standard Sheets of the Northern Circle, Central Provinces, reported in Appendix C of the Forest Survey Annual Report for 1893-94, 46 sheets of the Jubbulpore Division on the 4-inch scale have been published and 10 sheets of the same series have gone to the Press.

"This completes the whole of the Jubbulpore series including the Dhanwahie Range of the Mandla District. Nine sheets of the Narsinghpur forests on the 4-inch scale are in progress. All maps of the Northern Circle that have been published to date have been supplied to the local, forest and district officials."

Report by the Deputy Superintendent, Survey of India, in charge of No. 14 Party, Central Provinces.

Description.	Amount of work.	Cost.
Detail survey on 4" scale in district Nimar ...	217·62 sq. miles.	
Traversing with theodolite for 4" detail work in district Nimar.	* 29·9 linear miles.	
Detail survey on 4" scale in district Betul ...	351·38 sq. miles.	
		Rs. a. p.
Triangulation of 4" detail work ...	784·50 sq. miles.	Approximate total cost for survey area ending 30th September 1895 ... 80,145 0 0
Traversing with theodolite for 4" detail work in district Betul.	* 666·78 linear miles.	
Triangulation of 4" detail work in district Damoh.	1,378·00 sq. miles.	Add 4 per cent. for cost of instruments ... 3,205 12 9
Traversing with theodolite for 4" detail work in district Damoh.	* 586·76 linear miles.	Total cost of work for the year ... 83,350 12 9
Classification of forest growth and soil of the area surveyed in detail in districts Hoshangabad and Betul on separate skeleton traces for the Forest Department.	569·00 sq. miles.	
Off-set measurements over 222 linear miles of traverses in districts Hoshangabad and Betul.	.....	

* These amounts are approximate, and are subject to revision on completion of the computations of traverses.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

I.—Regulation of Management.

(*a*).—*Working-Plans and their Control.*

12. Considerable progress has been made in working-plans. This will be gathered from the following details:—

	Sq. miles.
(1) Areas for which working-plans were completed at the commencement of the year	973
(2) Areas for which working-plans were completed during the year	31
(3) Areas for which working-plans are in hand	2,367
(4) Areas not yet dealt with, excluding Class B-I areas ...	4,617
Total ...	7,988

By Divisions.

	Completed.	In hand.	Not yet dealt with.
Mandla	35	38	1,980
Jubbulpore	103	360	69
Damoh	89	278	432
Saugor	89	186	468
Narsinghpur	130	135	...
Hoshangabad	275	334	573
Betul	164	419	494
Nimar	119	617	601
Total ...	1,004	2,367	4,617

13. The first drafts of working-plans shown in the above table as being in hand have been completed, and only now require to be checked and so far amended as to conform to the views expressed by the Inspector-General of Forests in recent correspondence on the subject.*

* No. 14 Working-Plan, dated the 29th January 1895.
No. 46 Working-Plan, dated the 20th February 1895.
No. 121 Working-Plan, dated the 28th June 1895.

The work of compiling working-plans would have been carried out with more expedition than the results of the year show to have been the case, but for the fact that no reliable maps for some of the Divisions exist.

This want of accurate maps of forest boundaries has entailed considerable extra work in examining, and, where required, of actually surveying the boundaries. Working-plans for all forests in all Divisions, excepting Mandla, will be completed in manuscript by the end of the forest year 1895-96.

Preliminary reports covering 35 working-plan reports completed in 1893-94 are ready, and before final submission to the Inspector-General of Forests will be circulated along with the reports to Deputy Commissioners for opinion, as directed in Chief Commissioner's letter No. 3507, dated the 9th August 1895.

Preliminary reports relating to the working-plans in hand at close of the year, and also covering plans to be completed during the year 1895-96, are in the course of preparation, and these will be dealt with, when ready, in the manner shown above.

14. The details relating to the provisional working circles, *i. e.*, areas of localised fellings, are as follows:—

At the end of 1893-94 the number of provisional working circles reported open was 265 under coppice treatment and 52 under improvement fellings. Of

these circles, 119 have, however, since been absorbed into regular working-plans, leaving 198 still to be absorbed. One-half of this number will be included within areas for which working-plans have already been projected, the remaining moiety, or 99 in number, will remain open to supply the wants of the people in Mandla, as no extension of regular plans for the remaining areas in this district can be undertaken for some time owing to the absence of maps showing correctly the existing boundaries of the forests. The circumstances of the district are also such as to call for no urgency as regards this matter.

15. In Secretariat letter No. 3397, dated the 3rd August 1895, the Chief Commissioner has directed the Conservator's attention to the several points remarked on by the Government of India * when reviewing the Forest Report for 1893-94, and has ordered him to fully explain those points in this report. Explanation required under paragraph 2 of the review has already been rendered in a preceding part of this report. The remarks in paragraph 4 only now require to be dealt with here. The principal subject of the remarks in this paragraph relates to the all-important factor, which must dominate any system of working a forest, must be the existing demand and its probable development, and the uselessness of having working-plans which cannot be carried through. To these remarks the following reply is submitted :—

* Letter No. $\frac{733}{054}$ F, dated the 9th July 1895.

(1) The total area of reserved and unclassed State forests in this Circle amounts to 6,445,026 acres. From this should be deducted the area set apart under Class B-I in which land fit for cultivation is found. This area amounts to 1,321,359 acres, leaving thus 5,123,667 acres as likely to be held permanently under forest. Now it is this area that has, already to a very large extent, been brought under regular and rational management, and it is expected that regular working-plans for all but 1,890 square miles will be completed by close of the current forest year 1895-96. The Conservator with his printed letter No. S-353-161, dated the 21st September 1892, submitted his provisional working scheme to the Chief Commissioner for approval and orders; and the scheme was thereupon sanctioned in Chief Commissioner's Resolution No. 102, dated the 5th January 1893. Two printed copies of this scheme were forwarded, at his request, early in 1894 to Mr. Hill, Officiating Inspector-General of Forests. Full consideration was given to the subject of existing demand, and the discussion on this point will be found recorded as one of the details of the scheme. The orders of the Chief Commissioner, as quoted in Resolution No. 102, dated the 5th January 1893, however, demanded a considerable modification to be made in the scheme in regard to providing many more areas of cuttings than was contemplated. In carrying out the provisional scheme which had for its objective the rapid organization, on a scientific basis, of the enormous area of Government forests until then open to, and therefore at the mercy of, the consumers and purchasers of forest produce—not only as to how they might, within certain limited restrictions, cut down the forest when and where they liked and how they liked, but also quite irrespective of the fact as to the age or class of trees they might cut down—it was obviously necessary to frame an estimate of the probable area which was unproductive and also that which contained unworkable forest, such as grass lands, open glades and areas less than three quarters stocked. The inquiry at the time made resulted in our assuming, as a basis of operations, that 45 per cent. of the forest area that is to be perpetually maintained was at the present time unworkable. The detailed surveys made last open season by working-plan officers have fully confirmed and borne out this estimate. Therefore, dividing the total available area consisting of 5,123,667 acres by 30—period of rotation—the annual area to be worked over is 170,789 acres; but as 45 per cent. of this area is proved to be unworkable, the actual area over

which fellings would be allowed to pass is only 93,934 acres. That is assuming that every acre of the 5,123,667, or 8,006 square miles, was to be gone over once in 30 years minus the unworkable portion.

(2) It is now required that we show what the probable demand in the near future is likely to be. The total population of the Circle, excluding the Feudatory State of Makrai—there being no zamindaris—at the last census was 3,473,859, which is classed as an urban population, numbering 307,413, and a rural, numbering 3,166,446. The urban population is to a very great extent, almost if not wholly, dependent on the Government forests, while the rural population has still extensive malguzari forests to support it, though such private forests are being rapidly denuded and will not much longer continue to be sources for the supply of timber and firewood. For the purpose of justifying the large extensions made recently in regular working-plans in this Circle, the Forest Department in this Circle is put upon its defence, and it has therefore become necessary once more for it to show what are the possible and the only too probable demands the Government forests are likely to be called upon to meet in the very near future. The population is rapidly on the increase, with the extension of cultivation following as a consequence, while the general higher standard of education and living now prevailing among the well-to-do and middle classes of the population make it but too probable, having due regard to the existing orders of the Government of India and the Chief Commissioner on the subject,* that the Government forests will be strained to their utmost capacity in meeting the call that is only too likely to be made on them. However, before proceeding any further with these remarks, attention is asked to the remarks and observations of Dr. Schlich, Inspector-General of Forests, at paragraphs 14 to 30 of his suggestions regarding Forest Administration in the Central Provinces, dated the 1st June 1883. In paragraphs 15 to 17 Dr. Schlich discusses the requirements of the population, in paragraph 18 the requirements of public works, and in paragraph 19 those of industries. The remaining 11 paragraphs, 20 to 30, are devoted to the general discussion of population in relation to the forest area to be maintained for its support. In this connection a note by Mr. B. Ribbentrop, dated November 1885 to February 1886, should also be read—paragraphs 18 and 19. It will be perceived that Mr. Ribbentrop has largely quoted the opinion of Colonel Doveton on the subject, and has supported that officer's views by recording that:—"The assumption that 16,000 square miles is the minimum area which the Forest Department will be called upon to administer, is ably justified by Colonel Doveton." Colonel Doveton has estimated the minimum requirements in forest produce per head of population per annum at 12 maunds, which is equal to about 21 cubic feet of timber and fuel. Now, turning to the thread of our argument which we had left to refer to the recorded opinions of two of the Inspectors-General of Forests who have been placed at the head of the Forest Department, we will continue to show in what manner we have estimated the probable requirements, in forest produce, of the population which must continue to be dependent on the Government forests for its present and ultimate supplies.

*1. Government of India Circular No. 22-F, dated the 29th October 1894.
2. Chief Commissioner's Resolution No. 102, dated the 5th January 1893.

(3) It was said that the urban population is to a very great extent, if not wholly, dependent on the Government forests, and that the rural population had extensive private forests to fall back upon. Dr. Schlich has remarked that the private forests, under their present management, cannot supply the requirements of the people who depend on the forests of the Central Provinces (paragraph 27

of his suggestions). We will for the purposes of our estimate take the following figures:—

(*a*) The whole urban population of the circle.		307,413
(*b*) Half rural population of the circle	...	1,583,223
Total	...	1,890,636

The number of houses returned at the last census was:—

(*a*) Urban	...	67,416
(*b*) Half rural	...	322,316
Total	...	389,732 houses.

Estimating the requirements in fuel at 16 cubic feet and poles at 2 cubic feet per annum per head of population, then 1,890,636 × 18= 34,031,448 cubic feet. Now, to provide this outturn, we must fall back on the 93,934 wooded workable acres. The departmental fellings made in 1893, extending over 2,640 acres of wood, gave an average outturn of nearly 500 cubic feet, of which 446 cubic feet were classed as fuel and 52 as poles. *Of this latter nearly four-fifths were unsaleable as poles* owing to defects of growth. The fellings were coppice, leaving from 30 to 60 standards per acre. Improvement fellings also carried out in the Jubbulpore and Hoshangabad Divisions gave an average outturn of 150 cubic feet per acre. Mr. Hill saw the cuttings that were made in Hoshangabad at Mowhadana, and Mr Ribbentrop those made in Jubbulpore at Dhanwahie. Both pronounced the operation a success. Assuming that the 93,934 wooded acres to be treated as improvement fellings on a rotation of 30 years the average annual outturn will be a little over 14 millions of cubic feet, or if a shorter rotation, say of 10 years, and removing the same quantity of material from the acre in this rotation as in the longer one, the outturn will be doubled, or say a little over 28 millions of cubic feet per annum. But if the said acres are to be treated as coppice leaving 60 trees to the acre, then the outturn may be estimated at 47 millions of cubic feet or 13 millions more than the estimated demand. This demand of course does not allow for the requirements of local industries, or timber required for export or for agricultural purposes, but is merely calculated as providing for the actual personal necessities of the whole urban and one half of the rural population of this Circle. That these estimates are not overdrawn will be seen by the fact that only half the rural population has been taken into account. That 16 cubic feet of fuel and 2 cubic feet of poles are taken as the estimated requirements per annum per head of population. Colonel Doveton estimated 21 cubic feet as the annual requirement, and spread this over the total population of the Central Provinces, excluding Feudatories and Zamindaris.

(4) However, as a matter of fact, only a small proportion of the forest area in this Circle is being treated on the method of coppice with reserves, the latter numbering from 60 to 120 per acre, as all working-plans, since October 1893, prescribe improvement fellings, the annual outturn will fall short of the estimated demand as soon as that has fully set in. There are many causes still at work which have temporarily driven the population to private forests and keeps it there for the present at any rate. Overcuttings in malguzari forests, which set in about 1893, still feeds the people with firewood free. The free use of some of the Government forests has also during the past two years helped to largely stock private persons with firewood obtained for a mere song from the starving people who collected and sold it for a living. Such persons will not be expected to buy from the regular cuttings with their present stock still unexhausted. The use of cow-dung still largely prevails as a form of

fuel in common use among the people, though it is beginning to dawn upon them that cow-dung is more profitable to the agriculturists as a manure. In some districts juari and indian corn stalks, and the entire plant of the tur-dal, are largely used as fuel by the people: instead of this material therefore being returned to the soil in its organized condition, it is put there as the inorganic elements found in the ash, thereby throwing additional constructive labour on future generations of plants for whose use the ash may be applied as a manure.

(5) The working of the forests to the full extent provided by the working-plans, when we know that there lies a great possible future demand, need not trouble us over much at this day. No forest is any the worse, within reasonable limits of course, for not being worked to its fullest prescribed capacity, but as with us possibility is prescribed by area—and as the Officiating Inspector-General of Forests is strong on light improvement fellings in forests composed of trees 95 per cent. of the more advanced of which are only fit for firewood—it goes without saying that a large proportion of the existing stock will be necessarily retained for periods longer than the first rotation. Hence the trees which might have come out were the demand at its maximum may as well be left to grow a little while longer and thus help to improve the factors of the locality. Their presence can at any rate do no harm, and the forests will be all the more valuable whenever they are required to meet the full demand, and that call on the resources of the forests will not take long in coming, and when it arrives we shall be provided with an ample reserve of material—and no forest is any the worse for containing such a reserve of material as is here contemplated—wherewith to meet the call.

(6) In our returns of forest produce consumed by the people, we have all along been considerably hampered in the past by the method of commutation under which there was no count kept of the consumption of any class of produce. The possible consumption of fuel in Mandla under commutation cannot be less than 3 millions of cubic feet and yet our annual Form No. 57 for 1894-95 shows only 891,409 cubic feet as having been accounted for. It is also possible that with the limited protective establishment at the disposal of the Forest Department in these Provinces combined with the enormous extent of public forests to be administered that produce is surreptitiously removed from them in appreciable quantities by the people who have their homes within easy reach of the forests. It is however a fact, whatever truth may rest in the other supposition, that for years past the Forest Department in these Provinces, lacking reliable data, has under-estimated outturn. A reference to the table of reducing factors introduced by Colonel Doveton will show this very plainly. The object of these reducing factors was the conversion of loads of varying denominations into a common measure of volume. The tables in question are still in use.

(7) Then, in regard to forest rates. The maxima rates sanctioned by the Chief Commissioner in Resolution No. 102, dated the 5th January 1893, are enforced in some divisions while in others they have been reduced to the level of those in previous existence in those districts. Where the difficulty comes in is not that the rates are high but that the produce offered in exchange for it is vastly inferior to the stuff the people formerly helped themselves to when they had the free run of the Government forests. Now they have got to take the tree which has been marked for felling and not the one reserved for a future time when it shall have become of greater value to the country. Apart from this fact, only that in some districts forest rates have always been lower than in others, for instance, in Saugor, Damoh and Mandla, there is nothing in the sanctioned maxima

rates to take objection to. But that lowering those rates to the level of the quality of the timber now procurable from our cuttings was, one would suppose, an obvious elementary principle. As a rule, which has held good hitherto, the Government forests were more resorted to by the people than were the private forests, and this would again happen could the forests be thrown open to unregulated fellings, or else good and cheap timber be provided for the people: under this latter condition the State forests would have no reason to fear competition from private owners. But the State forests, from the fact of their being situated nearer to the people and therefore more accessible to them, have been worked irregularly and unremittingly during the past, and what we are suffering from now is not so much that our forest rates are too high or they are too low, but from our own shortsighted policy in the past, because what has been done in recent years in regulating, otherwise organizing, forest management in these Provinces, might have been accomplished 20 years ago. Since 1893 there has been a succession of years of bad harvest in this Circle, and during this time malguzari forests have also been thrown open to uncontrolled over-cuttings, or cuttings to any possible extent unhindered by any consideration but that of immediate profit; added to which the expected addition to the forest executive and protective staff, which would have helped us to cope with some of the existing difficulties under which forest administration is carried on, has been withheld. Organized forest management, which had no previous existence in the Central Provinces worthy of mention, was commenced in this Circle in 1893.

The advance the work has since made is already recorded elsewhere in this report. It is manifestly too early to judge of results. Working-plans as a guide to future management and to the control of forests, are not made to last for a day or for a year, or to bring forth or to cause to be produced within any like period all the possible eventualities which such plans provide for and control. Three years are therefore too short a span at the end of which to draw any just conclusions from the work that has been so far accomplished in this Circle.

(*b*).—*Annual Plans of Operations.*

16. These were submitted to the Conservator and were sanctioned for all Divisions except Betul, the Divisional Forest Officer of which failed to comply with the standing orders on the subject. As far as the circumstances of finance and the abnormal features of the year admitted, the annual plans were worked up to.

II.—Working of the Year.

(*a*).—*Communications and Buildings.*

17. Details are as follows :—

	Cost. Rs.
1.—*Roads.*	
New—68½ miles	2,898
Old—Repair and up-keep 388 miles	1,614
Total . .	4,512
2.—*Buildings.*	
New—108 new quarters built for Field establishment, Rangers 4, Foresters 4, Forest Guards 99, inclusive of one temporary Rest-house ...	4,495
2 wells dug	158
Old—8 rest-houses repaired...	528
240 old quarters for Field establishment repaired ...	1,227
	6,408

Comparison with last year's expenditure on these works is as follows :—

	1893-94.	1894-95.
	Rs.	Rs.
Cost	6,560	10,920

More work would have been accomplished, only that the estimates were cut down because of general financial pressure. For further details see Form No. 51.

(*b*).—*Protection of Forests from Injury.*

(1).—General Protection and Breaches of Forest Law.

18. There is no change to report in the usual methods enforced for the general protection of the forests from injury.

The number of forest offences reported during the year are compared with that for the year previous, and are as follows :—

	1893-94.	1894-95.	Differences.
	No.	No.	
1. Injury to forests by fire	44	113	+ 69
2. Unauthorized felling and appropriation ...	1,131	1,146	+ 15
3. Grazing	731	660	— 71
4. Other offences	112	93	— 19
Total ...	2,018	2,012	— 6

To the above should be added 74 cases pending from 1893-94.

In the statement below a similar comparison is made by Divisions :—

Division.	Injury to forest by fire.			Unauthorized felling of timber, &c.			Grazing without permission.			Other offences.			Total.		
	1893-94.	1894-95.	Difference.	1893-94.	1894-95.	Difference	1893-94.	1894-95.	Difference.	1893-94.	1894-95.	Difference.	1893-94.	1894-95.	Difference.
Mandla ...	5	7	+2	95	234	+139	41	281	+240	23	13	—10	164	535	+371

Mandla Division.—There is a nominal rise in the number of cases from 162 to 537. The explanation of this given by the Deputy Commissioner is that it is due to a wrong classification in the previous year, the number returned being registered according to the file, which might include several different cases

involving several persons but registered as one case. This procedure was detected and set right in the early part of the year, and the register of cases amended accordingly. The following figures would go to show that the wholly unauthorized procedure adopted in this Division originated in 1892-93:—

	1890-91.	1891-92.	1892-93.	1893-94.	1894-95.
Cases ...	619	520	335	164	535

Turning to the number of persons charged with committing forest offences, the Deputy Commissioner in his review of the forest report remarks that the number of persons involved in cases of unauthorized grazing has more than doubled, if comparsion be made with the previous year's figures; and he adduces evidence in support of this statement. For instance, the number of persons involved in 1892-93 was 380; in 1893-94, 524; and in 1894-95 1,140. The explanation advanced from time to time by the Deputy Conservator in charge to Conservator's references on the subject was that this abnormal increase is due to people residing in ryotwari villages, in which grazing is free, driving their cattle into the Government forests. The Deputy Commissioner, however, is able to state that more than 50 per cent. of the cases dealt with during the year referred to unauthorized grazing in forests closed to grazing, and he considers that more leniency ought to have been shown in dealing with such cases, as the offences were committed through ignorance of the limits of the closed areas not being sufficiently known to graziers. The Deputy Commissioner is doubtless right, and the Divisional Forest Officer wrong in so far that he acted without sufficient inquiry into the merits of each case of reported unauthorized grazing.

Jubbulpore Division.—The number of cases have decreased; while the number of persons involved has increasd from 743 to 898.

Damoh Division.—The forests were thrown open free to the starving population, and a prime cause for offence being thus removed fewer cases were reported by Forests Guards. Though doubtless considerable damage was done to the forest by the commission of prohibited acts which were not brought on the register of offences.

Saugor Division.—The number of criminal prosecutions went up from 26—44 persons to 47—102 persons; while the cases compounded went down from 785—1,828 persons to 407—934 persons. The explanation of these differences is that in all cases in which theft of valuable timber was proved the offenders were prosecuted, and as the forests were thrown open to the people for the free removal of dead wood, leaves, edible roots, &c., an important contributory cause for offence was thus removed for the time being. The differences in the number of cases and persons are not abnormal, and may be passed over without further explanation.

The total sums paid as compensation during the two years are compared as follows:—

	Rs.
1893-94	7,350
1894-95	6,672

The incidence per individual was accordingly in—

	Rs. a. p.
1893-94	1 5 10
1894-95	1 5 1

19. The throwing open during the year 1894 of the forests to free grazing and to the free removal of dead wood, grass, and edible roots, leaves, flowers, gum and honey, has been fully recognized by the local authorities as having afforded effectual relief from absolute starvation to a large number of people, as well as the relief to the agricultural classes whose live-stock was given free grazing, and who were thus able to tide over a very critical period.

20. Referring to paragraph 12 of the Resolution by the Chief Commissioner on the Forest Report for 1893-94, calling for explanation on the differences which appear in the returns from the several Forest Divisions as to the number of persons against whom complaint was made, and specially with

regard to this matter in Mandla and Saugor, in which districts more than 1,000 persons appear to have been charged with forest offences: it is as well, before proceeding with any further remarks on the subject, to reproduce the figures for the past five years for the two divisions in question, showing the number of forest offences reported, the number convicted, the number in which acquittals were obtained, and adding thereto the total number of persons involved. The above information will be found in the statement following:—

Year.	CASES DISPOSED OF									
	MANDLA.					SAUGOR.				
	Convicted.		*Acquitted.*		Pending.	*Convicted.*		*Acquitted.*		Pending.
	Cases.	Persons.	Cases	Persons		Cases	Persons.	Cases.	Persons	
1890-91	614	2,781	5	21	...	1,280	3,540	29	111	23
1891-92	515	1,857	3	22	1	1,050	3,036	135	480	165
1892-93	325	1,044	4	19	7	946	2,419	67	199	122
1893-94	167	1,079	2	12	2	811	1,872	10	43	65
1894-95	534	1,972	3	17	...	464	1,036	70	154	27

The figures above show that in both Mandla and Saugor a large number of persons were charged with forest offences; the decrease in later years in Saugor is a favourable feature, while the same cannot be said for Mandla; Saugor has a larger population than Mandla, and stands second only to Jubbulpore in that respect, and this fact alone would, one may think, account for the greater total number of forest offences when comparison is made with other districts in this Circle. In the case of Mandla the remarks already recorded explain, to some extent, why the number of forest offences should have increased in 1894-95. To the causes already mentioned we must add the existing system under which receipts from grazing and major forest produce is realized from the people, as being largely responsible for many more forest offences being returned from that district. The system here alluded to is an old one and did very well, and was therefore much in favour while the methods of forest protection were less developed than they are in the present day. Two-thirds of the Mandla District, however, consists of forests inhabited chiefly by Gonds, a people notorious for their restless, moving habits and disposition, rarely living long in one locality, and only, more often as not, too ready under any pretext, be it ever so trivial, to abandon their old homes for new ones. Under the *cheri* system in force in Mandla this peculiar idiosyncrasy of the Gond tells against him, for although he may be on the *cheri nistar* register as entitling him, on a future payment to be made to the State, to graze so many head of cattle and to help himself to so many poles and bamboos wherewith to repair his house or pull down and rebuild it, yet when he has migrated from, say, tahsil A, where he is known in his village, to tahsil B, where he is unknown to everybody, then while there should he help himself from the nearest forest to such produce as he considers he is entitled and be caught he is at once brought up with a round turn for an alleged breach of forest law. The case is there and then brought on the records as an offence, and, although in time the Gond may prove that he was registered and thus a privileged person, the process of identification is a long one. Gonds from neighbouring British and Independent States also frequently come over to Mandla to settle, and thus considerably complicate matters. Each such person when caught is accounted an offender. The remedy for this is simple—we have only to introduce the forest stamp vending system, which prevails in every other district in this Circle, to put an end to the existing state of things in that district: with a license in his possession, which he can buy at any forest

stamp vendor's station, the Gond may go where he likes and will find that he will be unchallenged so long as he can produce the forest license. That the case of Mandla is an exceptional one, the following statement will show. The disproportion of forest to police offences in Mandla is very striking and eloquent in its way when read with the preceding remarks.—

District.	Population.	Offences.		Percentage on Population.	
		Police, 1894.	Forest, 1894-95.	Police.	Forest.
Mandla	330,373	504	535	.15	·16
Jubbulpore	748,146	2,106	254	·20	·03
Damoh	325,613	592	103	·18	·03
Saugor	591,743	1,587	567	·27	·09
Narsinghpur	367,026	942	54	·26	·01
Hoshangabad	525,270	779	86	·15	·02
Betul	323,126	398	224	·12	·07
Nimar	253,486	243	189	·10	·07
Total ...	3,473,359	7,205	2,012	·21	·06

(2).—Protection from Fire.

21. The results of the year's protection are given in the details following :—

	Acres.
Area protected in 1893-94	2,491,896
„ added during 1894-95	188,306
Total ...	2,680,202
Area successfully protected	2,454,201
„ failed	226,001

The percentage of failures with cost of successful protection for the two years are as follows :—

1893-94 percentage of failures	4·7
1894-95 „ „	8·4

Cost of successful protection:—

	Rs. a. p.
1893-94	... 5 15 0
1894-95	... 7 1 8

The difference is accounted for by the larger failures during the year due to the higher percentages in Nimar and Hoshangabad, being 20·1 and 13·6 respectively, and to the higher initial cost of protection, which in 1893-94 was Rs. 5-10-6 per square mile for areas attempted, and Rs. 6-8-0 in 1894-95.

The season was a difficult one for successful protection, being dry with high prevailing winds. Specially was this so in the very dry district of Nimar, where incendiarism, largely contributing to forest fires, was the rule and not the exception. The large failures in Hoshangabad is attributed to the absence from the Division at the critical period of the personality of Mr. Thomas, who was on furlough for the greater part of the year.

The most successfully protected Divisions have been Saugor, Mandla and Betul; while following close on them Jubbulpore and Damoh come next.

The further details by Divisions will be seen from the statement following :—

Divisions.	Year.	Area under organized protection.			Result of protection during the dry season of areas		Percentage of failure to areas attempted.	Cost during the dry season	Average cost for areas attempted.		Average cost for areas successfully protected.	
		During 1892-93 and 1893-94.	Added during 1893-94 and 1894-95.	Total.	Successfully protected in	Failed in			Per acre.	Per square mile.	Per acre.	Per square mile.

22. In the statement following will be found the details of forest areas which, though not systematically fire-protected, are included in the general scheme of fire-protection now enforced in this Circle :—

Divisions.	Total area of Government forests.	Deduct area under special fire-protection.	Balance.	Area burnt over.	Area which escaped being burnt over.	Percentage of areas saved.	Remarks.
	Acres.	Acres.	Acres.	Acres.	Acres.		
Mandla ...	1,314,560	415,360	899,200	106,880	792,320	88·11	
Jubbulpore ...	341,055	157,948	183,107	14,701	168,406	91·97	
Damoh ...	542,955	196,855	346,100	19,257	326,843	94·43	
Saugor ...	484,230	119,417	364,813	4,220	360,593	98·84	
Narsinghpur ...	167,645	104,865	62,780	5,917	56,863	90·57	
Hoshangabad ..	855,886	249,792	606,044	116,609	489,435	80·76	
Betul ..	814,013	353,267	460,746	12,206	448,540	97·35	
Nimar ...	1,157,204	475,174	682,030	395,500	286,530	42·09	
Total ..	5,677,498	2,072,678	3,604,820	675,290	2,929,530	81·27	

The results, with the exception of Nimar, are apparently good.

(3).—Regulation of Grazing and Protection from Cattle.

23. During the year 186 square miles were added to the area closed to grazing, making a total of 1,330 square miles. The details following summarise the progress made up to the end of the year :—

	1893-94. In square miles.	1894-95. In square miles.
(1) Closed to all animals—		
Whole year ...	1,144	1,330
Part of year ...	...	...
(2) Closed to browsers only—		
Whole year ...	2,658	2,692
Part of year ...	...	...
Total ...	3,802	4,022

The area open to grazing and browsing animals was 6,051. But if from this be excluded the areas which are proposed and set aside for ultimate Ryotwari Settlements (2,088 square miles), the area over which no restrictions are placed as regards grazing is only 3,963 square miles.

(c).—*Improvement of Forest Growth.*

(1).—Natural Reproduction.

24. Is reported to have been favourable in all forest areas which are protected from fire and grazing. The past year was a good seed year and the early and prolonged rainfall of the monsoons helped to bring forth a crop of self-sown seedlings to an extent which has rarely been seen before. All species appear to have reproduced abundantly during the year.

The notes furnished by Divisional Forest Officers on the subject will be found as Appendix A to this Report.

(2).—Artificial Reproduction.

25. The usual operation of sowing seed in blanks was continued during the year with varying success. It is now decided to discontinue these operations, since reproduction from natural agency is, as a rule, far more satisfactory and reliable, provided fire and grazing are excluded, and that there are no abnormal conditions incidental to the locality which interfere with self-regeneration.

(3).—Early Thinnings.

26. No work carried out.

(4).—Other Operations for the Improvement of the Growing Stock.

27. Climbers were systematically destroyed over 31,003 acres. The number of climbers killed or cut back was 178,480; and the cost of the operation was Rs. 51-9-9. Much of the work was done without special cost by the labourers employed in systematic fellings.

The details of work done during 1893-94 and 1894-95 are compared as follows:—

	1893-94.	1894-95.
	Acres.	Acres.
Area worked over	211,683	31,003
	No.	No.
Climbers killed or cut back	45,197	178,480
	Rs. a. p.	Rs. a. p.
Cost	86 9 6	51 9 9

The large difference in area brought out by the above comparison is due to the larger area traversed in 1893-94 in the Hoshangabad Division yielding but a proportionately small result in the number of climbers killed:—

Division.	Area over which cutting extended in acres.	Number of climbers cut.	Cost of operations.	Remarks
			Rs. a. p.	
Mandla	2,694	29,559	33 13 9	
Jubbulpore	80	5,480	10 0 0	
Damoh	900	...	...	
Saugor	23,104	130,942	...	
Narsinghpur	1,804	2,902	...	
Hoshangabad ...	518	1,562	7 12 0	
Betul	1,903	8,035	...	
Total ...	31,003	178,480	51 9 9	

(5).—Experiments.

28. Experiments were made (*a*) in reproducing the *hurra* tree under artificial conditions in Mandla; (*b*) in pollarding certain species with the view to obtaining small straight poles much in demand by the people, and to increasing the production of small wood from trees already too far advanced in age to coppice; (*c*) to increase the propagation of *lac*; and (*d*) fellings made during the monsoons with the view to test the disadvantages, if any, of reproduction from stools at that season. The results of the experiment are briefly stated below:—

(i) *Hurra* sowings, 6,299 plots at a cost of Rs. 129. It is too soon to judge of results.

(ii) The pollarding in the Jubbulpore Division of such trees as *Palas*, *Ber*, *Salai* and *Gunja* was a decided success, and which promises good results.

(iii) In Betul, *lac* was propogated over a wide area, and the Divisional Forest Officer is sanguine of success. A similar experiment carried out previously in this Division proved a success.

(iv) Experimental fellings carried over half an acre in each month during July, August, September and October, were made in several Divisions in order to test the reproduction from stools when the cuttings are made during the monsoon season. It is too soon yet to judge of the results of this experiment. A large number of species have however coppiced readily, but, as would be expected, the shoots are weak and weedy. In another year or so it will be seen whether the coppice gives promise of recovering itself.

(*d*).—*Exploitation of Major Forest Produce.*

29. There was no change in the regular methods of working the forests from those described at paragraph 13 of the report for the year 1893-94. The area of forest brought under regular treatment is as follows:—

		Sq. miles.
(*a*)	Under coppice fellings ...	1,652
(*b*)	Under improvement fellings ...	988
	Total ...	2,640

The forests treated in the manner indicated above, are being rapidly brought under regular working-plans. The greater part of them are already controlled by such plans.

(5).—Unregulated Fellings.

30. In the Hoshangabad and Nimar Divisions only were unregulated fellings carried out in a few tracts marked off for Ryotwari Settlements.

(*e*).—*Extraction and Transport of Major Forest Produce by Land and Water.*

31. All timber and other forest produce are removed by consumers and purchasers from the forests by ordinary land carriage. About 50 per cent. of the produce taken from the Nimar forests was carried by the railway into the Bombay Presidency. Advantage was taken by purchasers of a demand to rail bamboos from the north of the Jubbulpore Division to Allahabad, at which place there was a ready sale for such produce. It is nevertheless a remarkable fact that little use is made of the railway which traverses the districts of Nimar, Hoshangabad, Narsinghpur and Jubbulpore in the Nerbudda Valley by purchasers even when removing produce for sale: apparently the difficulties connected with the breaking of bulk and terminal charges act as sufficient deterent causes to the free use of this means of rapid transport by the general exporter of forest produce.

(*f*).—*Exploitation of Minor Forest Produce.*

(1).—Extraction of Fodder.

32. The details are as follows:—

		By sale of grass. Rs.
1893-94	...	... 12,923, were realized.
1894-95	...	... 10,295
		Quantity sold. Tons.
1893-94	...	... 18,250
1894-95	...	... 11,356

Mandla Division.—3 tons were removed by purchasers; Rs. 2 realized.

Jubbulpore Division.—34 tons were cut and stacked Departmentally, of which 27 were sold and the balance remains in stock; and 454 tons were removed by consumers and purchasers. The standing crop of grass in certain plots was also sold. Rs. 767 were realized in the year.

Damoh Division.—127 tons were removed by purchasers and in addition to which some grass bearing plots were leased out. In all realized Rs. 232. However for the greater portion of the year grass was allowed to be removed free of charge; grazing was also given free.

Saugor Division.—Grazing and the removal of grass were allowed free to the people during a large portion of the year; 537 tons of grass were removed by purchasers, besides some plots containing standing crop were leased out. The total realization in the Division was Rs. 1,833.

Narsinghpur Division.—The forests in the north of the Division were open to free grazing and to the free removal of grass for the greater portion of the year. Some plots containing standing crop were leased, and 74 tons were removed by purchasers on license; Rs. 182 were realized.

Hoshangabad Division.—18 grass birs were leased out and 1,499 tons of fodder grass were removed during the year by purchasers on license; Rs. 1,979 were realized for the Division.

Betul Division.—3,692 tons of fodder grass were removed by purchasers; Rs. 1,962 were realized.

Nimar Division —4,943 tons of fodder grass were removed by purchasers in addition to which the standing crop on certain plots was leased out; Rs. 3,338 were realized in the Division.

(2).—GRAZING.

33. The year was a bad one as regards grazing revenue, as the follwing comparison will show :—

1893-94.	1894-95.	Difference.
Rs	Rs	Rs
2,38,971	1,98,407	40,564

Out of which Rs. 35,213 are accounted for in the districts of Damoh, Saugor and Narsinghpur alone.

During the year free grazing and the free removal of grass were allowed for the greater portion of the grazing season, *i. e.*, from 1st June to 15th October 1894, in the Saugor and Damoh Divisions, and in all the forests in the north of the Narsinghpur Division which lie within the district boundaries of Saugor and Damoh. In addition to the direct loss of revenue incurred by throwing the forests open to free grazing, a considerable number of cattle never left the forests at all after resumption of payments was ordered, but continued to graze, but with this difference that the owners pleaded inability to take out grazing licenses as not being possessed of the money to pay for them. Under these circumstances grazing was to some extent practically free throughout the year in those districts. The differences in grazing revenue from Damoh, Saugor and Narsinghpur for 1893-94 and 1894-95 are compared :—

	1893-94.	1894-95	Difference—less.
	Rs	Rs	Rs.
Damoh	33,818	20,416	13,402
Saugor	37,001	17,308	19,690
Narsinghpur... ...	9,442	7,421	2,121
		Total	... 35,213

34. The orders for free grazing have affected grazing receipts for the two past years, as the grazing licenses which would ordinarily be taken out in the month of June were not taken out, and free grazing was therefore continued well into the year 1894-95. Since the 1st June 1895 free grazing has again been allowed in the districts of Damoh, Narsinghpur and Saugor. In the Jubbulpore District the collections on grazing licenses for the current year have been put back till the autumn harvests have ripened and been gathered.

To sum up. The deficit in grazing receipts when compared with the previous year is Rs. 40,561. This deficit is due in part to free grazing allowed; in part to non-payment of dues when payment was resumed and demanded; and to the postponement of payment till the kharif crops have been harvested. This last measure affects the Jubbulpore District only. The details following show the number of animals which grazed in the Government Forests during the two past years including the number which grazed free of cost :—

	1893-94.	1894-95.
	No.	No.
Buffaloes	190,040	186,332
Cows and oxen	991,480	998,813
Goats and sheep	62,617	69,703
Camels	...	45
Other animals	1,052	1,765
Total ...	1,245,189	1,256,658

The number of animals which were licensed and for which grazing dues were paid during the year 1894-95, are placed in juxtaposition with the numbers for which dues were paid in the previous year.

	1893-94.	1894-95.
	No.	No.
Buffaloes	190,040	150,977
Cows and oxen	991,480	829,819
Goats and sheep	62,617	43,379
Camels	...	42
Other animals	1,052	1,500
Total ...	1,245,189	1,025,717
Difference—Less ...	...	219,472

Full details by Divisions will be found in Form No. 55.

(3).—Miscellaneous Produce.

35. The exploitation of miscellaneous produce was as follows :—

	1893-94.	1894-95.
(*a*) Myrobalans ... ... Tons	1,202	517
(*b*) Bamboos ... ... No.	8,736,176	6,985,450

The myrobalans were collected by Departmental agency in the Mandla Division. The outturn of the year was less by 685 tons than in the year previous owing to the crop being a poorer one. The quantity of myrobalans transported to Jubbulpore during the year was 761 tons, which is more by 244 tons than was transported during 1893-94. The saleable price of this article has gone down considerably within the last few years, from Rs. 2-14-0 to Rs. 1-14-0, at which rate the available stock in Jubbulpore was sold, realizing altogether Rs. 74,130, of which sum Rs. 47,571 are credited in the accounts for the year 1894-95 being the value of the myrobalans sold, in that year. The number of bamboos removed by purchasers during 1893-94 was 8,736,176, which is more by 1,750,726 than the number removed during 1894-95. Bamboos seeded profusely a few years back, and now the supply of dead culms, which have hitherto mainly helped to keep up the revenue from this source, are nearly exhausted, and there will consequently be a considerable fall of receipts from this source because the young crop now coming on, and which is a very promising one, will not be fit to cut for some years.

CHAPTER III.

GROSS YIELD AND OUTTURN OF FOREST PRODUCE.

General.

36. Every endeavour is being made to discourage Departmental operations in favour of the removal of produce by purchasers. The results of the year's work will show that considerable advance has been made in this direction. The Departmental collection of myrobalans has also been stopped under orders from the Chief Commissioner, and the future crops will, therefore, be sold to or leased out to contractors. In a few exceptional cases Departmental cutting of timber and fuel must continue to be made until such time as the people have learnt to do it for themselves properly.

The total outturn of produce worked out Departmentally is compared for the years 1893-94 and 1894-95 in the details following:—

	1893-94.	1894-95.
	Cubic ft.	Cubic ft.
Timber	71,025	6,415
Fuel	724,440	103,000
	No.	No
Bamboos	23,802	1,000
	Tons.	Tons.
Grass	23	34
Hurra (Myrobalans)	1,202	517
Miscellaneous	4	12

The total outturn of produce during the year 1894-95 is compared with the previous year, as follows:—

	1893-94.	1894-95.
	Cubic. ft.	Cubic ft.
(1) Timber in rough log ...	34,465	50,604
(2) Do. poles ..	224,637	428,877
(3) Miscellaneous pieces ...	91,000	3,674
(4) Fuel	3,790,385	3,643,150
	No.	No.
(5) Bamboos	8,736,176	6,985,450
	Tons.	Tons.
(6) Hurra (Myrobalans) ...	1,204	517
(7) Hides and horns ...	27	26
(8) Grass	18,352	11,363
	No.	No.
(9) Grazing animals	1,245,189	1,025,717
	Tons.	Tons.
(10) Miscellaneous produce ...	11,592	7,071

The following statements will show the outturn of major and minor forest produce by Divisions:—

37. I.—Departmental Operations.

(a).—Timber and Fuel.

Fellings.	Mandla	Jubbulpore	Damoh.	Saugor.	Narsingh-pur	Hoshanga-bad.	Betul.	Nimar.	Total.	Correspond-ing figures for 1893-94.
	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft	Cubic ft.	Cubic ft.	
Coppice	33,400	383	16,827	10,950	...	...	657	61,217	...	
Improvement	19,150	13,425	10,740	4,280	603	.		48,198	...	
Unregulated	...	...	...	...	...	...	...	...	...	...
Total	51,550	13,808	27,567	15,230	603		657	109,415	795,465	

The last column of the statement shows the outturn for the year 1893-94 as having been greater by 686,050 cubic feet.

(b).—Other Minor Produce.

Description.	Mandla.	Jubbulpore.	Damoh.	Saugor.	Narsingh-pur.	Hoshang-abad.	Betul.	Nimar.	Total.	Corresponding figures for 1893-94.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Bamboos ...	13	...	...	...	...	...	...	...	13	177
Grass ...	...	96	...	...	...	...	...	...	96	997
Myrobalans ...	47,371	...	...	...	...	...	13	...	47,384	
Hides and horns...	40	1	...	...	...	...	...	...	41	
Other produce ...	1,159	195	...	...	...	...	...	...	1,354	
Total ...	48,783	292	...	...	...	...	13	...	49,088	1,174

The sale of *hurra* (myrobalans) is a heavy item in the year's transactions. The sale-proceeds for 1894-95 were larger by Rs. 47,914 than the year previous.

38. II.—Removal of Produce by Purchasers.

(a).—Timber and Fuel.

Fellings.	Mandla.	Jubbulpore.	Damoh.	Saugor.	Narsingh-pur.	Hoshanga-bad.	Betul.	Nimar.	Total.	Corresponding figures for 1893-94.
	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	Cubic ft.	
Coppice ...	40,334	269,982	28,234	...	12,150	...	81,687	228,912	648,249	...
Improvement ...	...	23,900	153,647	223,804	121,750	815,831	273,238	343,366	1,955,536	...
Unregulated ...	851,075	70,200	...	..	...	307,457	...	184,383	1,413,115	...
Total ...	891,409	364,032	178,881	223,804	133,900	1,123,288	354,915	756,661	4,016,890	3,345,922

During the greater part of the year the Government forests in the Damoh, Saugor and the northern portion of Narsinghpur districts, and, latterly, those in Jubbulpore and all in Narsinghpur were thrown open to the people for the free removal of fuel and minor produce—the quantity removed though very large cannot be accounted for, owing to the difficulty that was found with the limited establishments at our disposal of guarding every outlet through which the produce could be carried away by thousands of poor and needy persons who found ready sale for it among the richer and well-to-do cultivators.

The outturn now shown as the result of unregulated fellings is the dead wood removed under commutation payments. The quantity removed in Betul is not recorded in the Divisional report, and it therefore does not appear in the returns now submitted.

(b).—Other Minor Produce.

Description.	Mandla	Jubbulpore	Damoh.	Saugor.	Narsingh-pur.	Hoshanga-bad.	Betul.	Nimar.	Total.	Corresponding figures for 1893-94.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Bamboos ...	...	...	..	. .	...	...	.	...	46,720	56,801
Grazing ...	87,432	20,652	20,516	17,308	7,421	22,888	21,309	28,981	1,96,407	2,38,971
Grass ...	2	308	40	117	22	1,353	1,952	2,588	6,282	
Sales by contract.	1,655	5,314	5,654	4,916	2,889	3,821	11,169	1,390	36,809	53,680
Hides and horns...	129	34	..	10	...	97	7	...	277	
Other produce ...	140	1,006	256	706	93	2,343	593	529	5,735	
Commutation ...	865	120	..	...	...	20	242	...	1,247	
Outstanding ...	...	...	1,327	...	381	.	23	...	1,730	982
Total ...	90,223	27,494	27,603	23,057	10,806	30,421	37,294	33,488	2,97,196	3,49,414

The striking divergencies in the figures are connected with a less number of bamboos removed and less revenue derived from grazing during the year.

Grazing was free in the districts of Damoh, Saugor and the north of Narsinghpur from the 1st June to the 15th October 1894, and again it was free throughout the whole of June 1895, and will continue to be free in the affected districts, so far as can be judged at the present time from the state of the crops, up to the 15th October ensuing, or perhaps to a later date.

III.—Free Grants.

39. No estimate was possible as to the quantity of produce removed free under the pressure of famine. An estimate has, however, been framed as to the probable value of the free grazing, which is about Rs. 35,213.

40. IV.—Summary of Produce removed from the Forests.

CHAPTER IV.

FINANCIAL RESULTS.

41. A report on the financial results, for the financial year 1894-95, has already been submitted, as required by Section 267 of the Forest Department Code, to the Second Secretary to the Chief Commissioner, with Conservator's Office letter No. 4488, dated the 27th July 1895. The main facts of the financial results of the year are as follow:—

FINANCIAL YEAR.

	1893-94.	1894-95.
	Rs.	Rs.
Receipts	5,34,958	4,61,884
Expenditure	4,96,865	4,12,166
Surplus	38,093	49,718

The figures are taken from the Comptroller and Auditor-General's summaries for those years. Receipts according to those summaries for the financial year were less in 1894-95 by Rs. 73,074 and expenditure less by Rs 84,699, while the surplus was more by Rs. 11,625.

The following is a summary of Comptroller and Auditor-General's figures of receipts and expenditure for the forest years 1893-94 and 1894-95:—

	1893-94.	1894-95.
	Rs.	Rs.
Receipts	5,31,561	5,04,094
Expenditure	4,96,715	4,01,326
Surplus ...	34,866	1,02,768

The classification of receipts adopted by the Comptroller and Auditor-General does not admit of showing the actual sources from which the revenue was derived for the two forest years: the following comparative statement for the years 1893-94 and 1894-95 has, therefore, been compiled in the Conservator's Office.

It will be observed that there appear, both in the details and totals of the comparative statement, figures which are not to be found in the summaries of the Comptroller and Auditor-General. Such divergencies must be expected to appear between the two classified accounts when it is considered that the total receipts from sale of forest stamps are credited in one lump sum as revenue by the Accounts Department.

Comparative statement of Revenue for the Forest Year 1894-95.

Budget Heads.	1893-94.	1894-95.	More.	Less.
REVENUE.	Rs.	Rs.	Rs	Rs.
I.—Timber and other produce removed from the forests by Government agency—				
(*a*) Timber	1,801	32	...	1,859
(*b*) Firewood and charcoal	1,925	45	...	1,880
(*c*) Bamboos	177	13	...	164
(*d*) Sandal wood	...	...	...	...
(*e*) Grass and other minor produce	992	49,075	48,003	...
Total I ...	4,975	49,165	48,093	3,903
II.—Timber and other produce removed from forests by consumers or purchasers	40,937	11,366	...	29,571
(*a*) Timber	76,286	90,856	14,570	...
(*b*) Firewood and charcoal	35,410	39,654	4,244	...
(*c*) Bamboos	56,801	46,720	...	10,081
(*d*) Grazing and fodder grass	2,52,121	2,08,606	...	43,515
(*e*) Other minor produce	39,827	38,893	...	934
(*f*) Forest stamps	...	24,771	247,71	...
(*g*) Other items	119	...	...	119
Total II ...	5,01,501	4,60,866	43,585	84,220
III.—Drift and waif wood and confiscated forest produce ...	1,208	941	...	267
Total III ...	1,208	941	...	267
IV.—Revenue from forests not managed by Government—				
(*a*) Duty on foreign timber and other forest produce ...	...	...	...	...
(*b*) Revenue from shared and private forests ...	...	...	...	...
Total IV ...	...	...	...	...
V.—Miscellaneous.				
(*a*) Fines and forfeitures	139	22	...	117
(*b*) Refunds.	874	583	...	291
(*c*) Other sources	21,194	16,534	...	4,660
Total V ...	22,207	17,139	...	5,068
Grand Total Revenue ...	5,29,891	5,28,111	91,678	93,458
			Difference	1,780

The main facts to be gathered from the above statement is that the classified forest revenue for the years 1893-94 and 1894-95 was Rs. 5,55,098 and Rs. 4,64,969 in the financial years; and Rs. 5,29,891 and Rs 5,28,111 respectively. in the corresponding forest years. To bring about agreement between the Comptroller's figures and those of the Conservator the following comparison is made even at the risk of repeating the figures :—

Financial Years.

	1893 94 Rs	1894-95 Rs
(*a*) Comptroller's figures	5,34,958	4,61,884
(*b*) Conservator's do. ...	5,55,098	4,64,969
Difference .	20,140	3,085

Forest Years.

	1893 94. Rs	1894 95 Rs.
(*a*) Comptroller's figures	5,31,581	5,04,094
(*b*) Conservator's do	5,29,891	5,28,111
Difference ...	1,690	24,017

The true explanation of the differences has already been given in paragraph 47 of the report for 1893-94.

It will be observed from the detailed comparative statement that in the forest year 1894-95 receipts under R-I were :—

	Rs
(*a*) More by	48,093
(*b*) Less „	3,903
Net difference—more by ...	44,190

The increase was by sale of *hurra* Rs. 48,093. The decrease was under sub-heads R-I (*a*), Rs. 1,895, R-I (*b*), Rs. 1,880 ; and R-I (*c*), Rs 164.

Under R-II :—

	Rs.
(*a*) More by	43,585
(*b*) Less „	84,220
Net difference—less by ..	40,635

Receipts were more under R-II (*a*) Rs. 14,570; R-II (*b*) Rs. 4,244 and R-II (*f*) Rs. 24,771 than in the previous year: while they were less under R-II Rs. 29,571; R II (*c*) Rs. 10,081 ; R-II (*d*) Rs. 43,515; R-II (*e*) Rs. 934 and R-II (*g*) Rs. 119.

Under R-III receipts were less by Rs. 267.

Under R-V receipts were less by Rs. 5,068.

42. Expenditure during the forest year 1894-95 is shown and compared with that of the previous year in the statement following :—

Budget Heads.	EXPENDITURE.			
	Forest year 1893-94.	Forest year 1894-95.	DIFFERENCE. More, Forest year 1894-95.	DIFFERENCE. Less, Forest year 1894-95.
A.—CONSERVANCY AND WORKS.	Rs.	Rs.	Rs.	Rs.
I.—Timber and other produce removed from the forests by Government agency ...	3,500	1,050	...	2,450
(a) Timber ...	2,534	1,515	...	1,019
(b) Firewood and charcoal ...	...	56	56	...
(c) Bamboos ...	143	...	...	143
(d) Sandal wood ...	...	...	...	...
(e) Grass and other minor produce ...	20,264	23,618	3,354	...
Total ...	26,441	26,239	...	202
II.—Timber and other produce removed from forests by consumers and purchasers ...	65,687	64,278	...	1,409
III.—Drift and waif wood and confiscated forest produce.	75	70	...	5
IV.—Revenue from forests not managed by Government—				
(b) Duty on foreign timber and other forest produce ...	...	...	...	...
(a) Revenue from shared and private forests ...	...	...	...	...
V—Rent of leased forests and payments to share-holders in forests managed by Government ...	124	92	...	32
VI.—Live-stock, stores, tools and plant—				
(a) Purchase of cattle ...	2,227	315	...	1,912
(b) Feed and keep of cattle ...	1,428	1,399	...	29
(c) Purchase of stores, tools and plant ...	4,106	1,699	...	2,407
Total ...	7,761	3,323	...	4,438
VII.—Communications and buildings—				
(a) Roads and bridges ...	2,403	4,405	2,002	...
(b) Buildings ...	3,569	6,111	2,542	...
(c) Purchase of stores, tools and plant ...	595	757	162	...
Total ...	6,567	11,363	4,706	...
VIII.—Demarcation, improvement and extension of forests—				
(a) Demarcation ...	5,731	5,955	224	...
(b) Compensation for land and rights ...	...	...	...	...
(c) Surveys ...	1,10,897	16,838	...	94,059
(d) Working-plans ...	4,754	10,334	5,580	...
(e) Sowing and planting ...	...	927	1,111	184
(f) Protection from fire ...	28,333	27,530	4,197	...
(g) Other works ...	439	52	...	387
Total ...	1,46,081	61,820	...	84,261
IX.—Miscellaneous—				
(a) Refunds ...	1,648	763	...	885
(b) Law charges ...	85	139	54	...
(c) Other charges ...	506	831	325	...
Total ...	2,239	1,733	...	506
TOTAL A.—CONSERVANCY AND WORKS ...	2,54,975	1,08,918	...	86,057

Expenditure in 1894-95 was less by Rs. 90,853 under all heads excepting A-VII, under which it was more by Rs. 4,796, leaving a net difference of Rs. 86,057. The main difference is due to the larger portion of survey charges not having been adjusted in the year's accounts.

43. Expenditure under "B.—Establishment" is compared in the statement following :—

Budget Heads.	EXPENDITURE.			
	1893-94.	1894-95.	DIFFERENCE. More Forest year 1894-95.	DIFFERENCE. Less Forest year 1894-95.
B.—ESTABLISHMENT.	Rs.	Rs.	Rs.	Rs.
I.—Salaries—				
(a) Conservator	14,359	16,200	1,841	...
(b) Superior officers	70,620	53,484	...	17,136
(c) Subordinates, forest and depôt establishment.	95,852	96,792	940	...
(d) Office establishment	18,307	18,521	214	...
(e) Deputation	2,804	3,298	494	...
(f) Exchange compensation allowance ...	8,728	8,377	...	351
Total ...	2,10,670	1,96,672	...	13,998
II.—Travelling allawance.				
(a) Conservator	1,018	818	...	200
(b) Superior officers	7,455	7,261	...	194
(c) Subordinates, forest and depôt establishment.	6,258	8,906	2,648	...
(d) Office establishment	1,041	1,004	...	37
Total ..	15,772	17,989	2,217	...
III,—Contingences.				
(a) Stationery	327	270	...	57
(b) Carriage of tents and records ...	5,535	6,458	923	...
(c) Rent, rates and taxes	152	31	...	121
(d) Pay of police guards	...	...	...	...
(e) Official postage	2,457	2,643	186	...
(f) Sundries	6,827	8,345	1,518	...
Total ...	15,298	17,747	2,449	...
GRAND TOTAL ...	2,41,740	2,32,408	...	9,332

The charges were less by Rs. 9,332 than in the year previous, thus :—

	Increase Rs.	Decrease. Rs.
B-I ...	3,489 ...	... 17,487
B-II ...	2,648 ...	... 431
B-III ...	2,627 ...	... 178
Total ...	8,764	18,096

Net decrease Rs. 9332, as follows :—

B-I.—Less Rs. 13,998, due to one Deputy Conservator of Forests, 1st grade, being for the greater part of the year on furlough, and to one Deputy Conervator of Forests transferred early in the year to the Southern Circle.

B-II.—More Rs. 2,217, due to Working-Plans Officers being out for longer periods than in previous year.

B-III.—More Rs. 2,449. Increased cost of carriage of tents, Rs. 923; official postage, Rs. 186; and sundries, Rs. 1,518. This last includes the cost of uniforms chargeable to Government, and nominally in part to a wrong classification in the accounts of the year previous.

44. In the following statement the receipts and charges for the forest year are shown and compared by Divisions :—

Divison.	FOREST YEARS.							
	RECEIPTS.		CHARGES.		SURPLUS.		DEFICIT.	
	1893-94.	1894-95.	1893-94.	1894-95.	1893-94.	1894-95.	1893-94.	1894-95.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Direction ...	721	51,308	33,773	35,826	...	15,482	33,052	...
Mandla ...	93,411	93,103	73,944	80,069	19,467	13,434	...	...
Jubbulpore ...	57,703	50,977	44,589	44,977	13,114	6,000	...	...
Damoh ...	42,981	19,506	24,047	25,405	18,934	...	...	5,899
Saugor ...	59,029	27,690	40,516	40,440	18,513	...	...	12,941
Narsinghpur ...	19,731	13,605	28,929	25,227	...	...	9,198	11,622
Hoshangabad ...	1,10,021	86,117	56,081	54,959	53,940	31,158	...	...
Betul ...	67,830	69,562	44,957	41,919	22,873	27,643	...	...
Nimar ...	80,154	92,217	51,172	51,904	28,982	40,313	...	...
Total ...	5,31,581	5,04,094	3,98,008	4,01,326	1,33,573	1,02,768	...	...

The cost of management in three districts in which the general food scarcity, due to the failure of crops, was most felt show a large excess over receipts.

45. The financial results of the forest year 1894-95 are given in the statement following:—

	Receipts.	Charges.
	Rs.	Rs.
I.—Departmental working	48,913	31,049
II.—Other revenue	4,55,181	1,54,292
III.—Protection, &c.	...	2,15,985
Total ...	5,04,094	4,01,326

46. The difference in the value of timber and other produce and of live and dead-stock in hand at the beginning and at the close of the year under report was :—

	Timber and other produce.	Live and dead-stock.
	Rs.	Rs.
Value on 1st July 1894	1,59,646	38,625
Do. on 30th June 1895	80,314	36,967
Total ...	—79,332	—1,658

Nett against the year ... ... Rs. 80,990

Due to the fact that during the year less work was done Departmentally—hence less material remained as balance in stock at close of the year. Besides, in the previous year the *hurra* in stock was estimated at the rate of Rs. 2-14-0 per maund, whereas in the year under report it has been estimated at the existing market rate of Rs. 1-12-0; there being also a less quantity of *hurra* now held in stock.

CHAPTER V.

FOREST ADMINISTRATION.

47. The charge of the Circle was held throughout the year by Mr. R. H. E. Thompson. The number of officers present on duty and in charge of Divisions at the commencement and close of the year was as follows :—

	At commencement of year.	At close of year.
Deputy Conservators ...	4 ...	4
Assistant Conservator ...	1 ...	...
Extra Deputy Conservator	1 ...	1
Extra Assistant Conservators	1 ...	2
Forest Ranger ...	1 ...	...
Total ...	8	7

One Extra Assistant Conservator was in charge of two Divisions since the 14th May 1895.

48. The total number of officers attached to the Circle at the commencement and close of the year will be seen as follows :—

Conservator	1 ...	1
Deputy Conservators ...	4 ...	4
Assistant do.	2 ...	1
Extra Deputy Conservator ...	1 ...	1
Extra Assistant Conservators ..	3 ...	3
	11	10

49. Mr. W. P. Thomas, Deputy Conservator of Forests, 1st grade, returned from one year's furlough and assumed charge of the Hoshangabad Division with effect from the 23rd March 1895.

Mr. H. Moore, Deputy Conservator of Forests, one year's furlough from the 2nd September 1894.

Mr. R. C. Milward, Assistant Conservator of Forests, furlough on medical certificate with effect from the 18th September 1894.

Mr. Milward was transferred, while still on furlough, to the North-Western Provinces—*vide* Government of India Order No. 475-F, dated the 3rd May 1895.

Mr. A. M. F. Caccia, Assistant Conservator of Forests, special leave on private affairs with effect from the 18th March 1895.

Mr. R. C. Thompson, Extra Assistant Conservator, three months' privilege leave with effect from the 16th July 1894.

Mr. Syed Ali Muttaki, Forest Ranger and Divisional Forest Officer, Damoh, transferred to the Civil Department with effect from the 13th May 1895.

Mr. H. E. Bartlett, appointed by Her Majesty's Secretary of State for India as an Assistant Conservator of Forests, 2nd grade, joined the Hoshangabad Division with effect from the 26th November 1894, afternoon.

50. The several Divisions were held during the year by the following officers :—

Divisions.	Officers.	From	To
Mandla ...	Mr. W. King, Deputy Conservator of Forests	1st July 1894.	30th June 1895.
Jubbulpore..	„ F. C. Hicks do. do.	Do.	Do.
Damoh ...	„ Syed Ali Muttaki, Forest Ranger	Do.	13th May 1895.
	„ Mohamed Kadir Bux, Extra Assistant Conservator of Forests.	14th May 1895.	30th June 1895.
Saugor ...	„ G. F. Taylor, Deputy Conservator of Forests ...	1st July 1894.	Do.
Narsinghpur.	„ Mohamed Kadir Bux, Extra Assistant Conservator of Forests	Do.	Do.
Hoshangabad	„ A. M. F. Caccia—		
	Assistant Conservator	Do.	17th March 1895.
	Deputy Commissioner	18th March 1895.	22nd March 1895.
	„ W. P. Thomas, Deputy Conservator of Forests ...	23rd March 1895.	30th June 1895.
Betul ...	„ H. Moore, do. do. do.	1st July 1894.	1st Sept. 1894.
	„ S. G. Paranjpe, Extra Asst. do. do.	2nd Sept. 1894.	30th June 1895.
Nimar ..	„ M. Muttanah, Extra Deputy do. do.	1st July 1894.	30th June 1895.

51. The following passed private students (upper course) from the Dehra Forest School were appointed as Forest Rangers during the year :—

R. N. Thompson, with effect from the 7th June 1895.
Dinkar Vishnu Paranjpe, with effect from the 27th June 1895.

52. The following stipendiary passed students from the Dehra Forest School rejoined the Circle for duty :—

Mr. Pinder.
Mr. Gowrishanker. } Upper course.

One senior student who had failed to pass the prescribed course has since been allowed another year at the school. During the year 6 stipendiary students were deputed to the Dehra Forest School for instruction (upper course).

Four stipendiary students, deputed during the previous year, are now completing their second year's course.

53. With reference to Second Secretary's endorsement No. 2881, dated the 28th June 1895, three passed students—Ratteeram Khamparia, Chakouree Lall and Bunsidhar—of the Agricultural College, Nagpur, were appointed during the year as Foresters, 6th grade.

54. The sanctioned strength of the subordinate forest services is given in the statement below :—

Designation.	Scale apportioned to the Northern Circle.	
	Number.	Monthly cost.
		Rs.
Forest Rangers	22	1,570
Foresters	80	2,485
Forest Guards	657	4,940
Total ..	768	8,995

55. And the effective strength of this establishment at the commencement and end of the year will be seen as follows :—

Designation.	Actual strength as it stood on the 1st July 1894.		Actual strength as it stood on the 30th June 1895.	
	Number.	Monthly cost.	Number.	Monthly cost.
		Rs.		Rs.
Forest Rangers	21	1,510	21	1,400
Foresters	87	2,425	86	2,385
Forest Guards	657	4,940	657	4,940
Total ...	765	8,875	764	8,725

56. The Rs. 70 grade of forest rangers, old scale, was abolished, the 5 posts in that grade having been relegated to the Rs. 60 grade in conformity with Sections 22 and 24, Forest Department Code—*vide* letter No. C-784, dated the 25th September 1894, from the Secretary to the Chief Commissioner, Central Provinces. These sections of the Forest Department Code have, however, since been amended.

57. Below appears a statement, being an abstract from the defaulter sheets of the subordinate forest service, showing the major and minor punishments awarded to members during the year :—

	Permanent.					
	Forest Rangers.	Foresters.	Forest Guards.	Office Clerks.	Office Orderlies.	Total.
MAJOR.						
Prosecutions	...	...	5	1	...	6
Dismissals	...	3	52	1	...	56
Permanent reduction involving less than one month's pay ...	...	6	19	...	...	25
Suspensions	...	5	23	2	...	30
Fine of 1 month's pay	...	...	8	...	...	8
Total ...	...	14	107	4	...	125
MINOR.						
Fine of less than one month's pay	1	112	128	20	2	263
Reduction for short period	...	6	1	...	...	7
Total ...	1	118	129	20	2	270

Compared with the previous year, under major punishments there were five more awards in 1894-95, the figures being 125 as against 120 in the previous year. But under minor punishments the number of awards has risen to 270 from 145, the figure for 1893-94. The explanation offered for this increase is that it is the result of repeated instances of reprehensible unpunctuality in correspondence and in the discharge of field duties on the part of the lower subordinate establishment—both are doubtless serious defects. The duties of the field establishment has, however, increased very materially during the last two or three years, and yet it is nevertheless the Conservator's duty here to remind Divisional Forest Officers of the Chief Commissioner's remarks, in the Resolution on the Forest Report for 1892-93, regarding the inadvisability of inflicting continued punishments for petty offences.

58. It is very gratifying to the Conservator to be able to report that all Divisional Forest Officers worked well during the year. The following, however, merit special notice :—

Mr. W. P. Thomas, Deputy Conservator of Forests, since his return from furlough; general efficiency.

Mr. G. F. Taylor, Deputy Conservator of Forests, good at out-door work; less efficient as regards office business.

Mr. F. C. Hicks, Deputy Conservator of Forests, who still continues to perform out-door duties with great zeal and energy.

Mr. M. Muttanah, Extra Deputy Conservator of Forests, has worked with his usual energy and zeal.

Mr. A. M. F. Caccia, Assistant Conservator of Forests, for successful charge of the Hoshangabad Division, which he held for the greater portion of the year.

Mr. S. G. Paranjpe, Extra Assistant Conservator, for working successfully his charge of the Betul Division.

Forest Ranger Ali Muttaki. The latter has been appointed to officiate as Tahsildar of Dindori, in the Mandla District. In this remote Tahsil his efficiency as a forest officer will be of special value to the administration of that district.

59. The officers employed as Working-Plans Assistants have performed their field duties with much zeal, and some with marked ability; they have given general satisfaction in the results of the year's outturn of work.

R. H. E. THOMPSON,

Conservator of Forests, Northern Circle,

Central Provinces.

BENGAL SECRETARIAT
LIBRARY

STATEMENTS.

Appendix C.

Notes on Natural Reproduction.

Division.	Name of Coupe, Circle and Range	Underlying rock and soil.	Particulars.	Remarks.
Balaghat ...	Manpur Coupe, Naihra Valley Circle, Dhansua Range.	Crystalline rocks with mica. Soil deep sandy loam, in places very stony.	Improvement fellings 1893-94, 63 acres; 1894-95, 63 acres; the average number of shoots per stool, average height, and average girth were taken in the case of 19 species which had done best, with the following results:—	
			Acres. / Fellings of / Average number of shoots per stool. / Average height (feet). / Average girth (inches). 63 / 1893-94 / 6 / 6 / 2 63 / 1894-95 / 7 / 4 / 1¼	
	Titwa Coupe, Naihra Valley Circle, Dhansua Range.	Crystalline and sandstone rocks. Soil sandy loam with no great depth.	Acres. / Fellings of / Average number of shoots per stool. / Average height (feet). / Average girth (inches). 33 / 1893-94 / 5 / 6 / 2½ 33 / 1894-95 / 5 / 4 / 1½	
			The number of seedlings counted over an average acre in this coupe was found to be as follows:—	
			Saj ... 75 / Lendia ... 3 / Mokha ... 2 Bija ... 13 / Gongal ... 1 / Mohwa ... 6 Dhaura ... 6 / Ghoti ... 2 / Kumhi ... 1 Khair ... 12 / Salai ... 4 / Achar ... 1	
	Servi Coupe, Dhansua Circle, Dhansua Range.	Crystalline and sandstone rocks, and in places trap. Soil sandy loam containing many rocky nalas.	Improvement fellings:—	
			Acres. / Fellings of / Average number of shoots per stool. / Average height (feet). / Average girth (inches). 88 / 1893-94 / 5 / 5 / 2 88 / 1894-95 / 6 / 3 / 1½	
			The number of self-sown seedlings counted over an average acre in this coupe were as follows:—	
			Saj ... 14 / Bhillawa ... 2 / Lendia ... 20 Bija ... 28 / Aola ... 6 / Dhaura ... 25 Tendu ... 12 / Dhamun ... 3 / Dhobia ... 28 Tinsa ... 10 / Ghoti ... 9 / Kurlu ... 7 Char ... 16 / Baranga ... 11 / Kurro ... 5 Mokha ... 7 / Salai ... 18 / Menhar ... 6	

Appendix C.—(*Contd.*)

Division.	Name of Coupe, Circle and Range.	Underlying rock and soil.	Particulars.	Remarks.
Balaghat.—(*Contd.*) ...	Oda Coupe, Dhansua Circle, Dhansua Range.	Crystalline rocks and igneous trap. Soil sandy, of no great depth; much strewn with stones.	Improvement fellings:—	

Acres.	Fellings of	Average number of shoots per stool.	Average height (feet).	Average girth (inches).
43	1893-94	6	5½	2
92	1894-95	5	3	1½

The number of self-sown seedlings counted over an average acre in this coupe was as follows:—

Saj	35	Mohwa ...	15	Bhira ...	5
Bija ...	25	Sewar ...	7	Gongal ...	12
Lendia .	28	Sa al ...	9	Khammar ...	10

Junawani Coupe Pipalgaon Circle, Dhansua Range.	Crystalline rocks, soil sandy of very little depth, strewn with limestone	Improvement fellings — Acres. 10, 26 — Fellings of 1893 94, 1894 95 — Average number of shoots per stool 7, 6 — Average height (feet) 5½, 3 — Average girth (inches) 2, 1½ The number of self sown seedlings counted in an average acre in this coupe was as follows — Saj 15, Bija 10, Char .. 6, Tendu 4, Hurra 2, Tinsa 1, Lendia 9, Dhaura . 22, Ghoti .. 11, Aula 6, Mowai 3, Kharash 9
Nagjhar Coupe, Rumruma Circle, Sonawani Range	Metamorphic and crystalline rocks, with gneiss-mica schist and quartz, soil a rich sandy loam with a mixture of trap	Improvement fellings — Acres 75, 50 — Fellings of 1893 94, 1894 95 — Average number of shoots per stool 8, 8 — Average height (feet) 7½, 3½ — Average girth (inches) 3, 2 The number of self-sown seedlings counted in an average acre in this coupe was as follows — Garari 12, Saj 25, Palas 20, Khair 6, Bahera 4, Ghoti 7, Dhaura 5, Salai 10, Amaltas 5, Rohan 4
Mahuljhar Coupe, Bhandamurri Circle, Sonawani Range	Crystalline and sandstone rocks. Soil sandy loam rich and deep	Improvement fellings — Acres 40, 37 — Fellings of 1893 94, 1894-95 — Average number of shoots per stool 6, 7 — Average height (feet) 7½, 3 — Average girth (inches) 2½, 2 The seedlings in this coupe were not counted, but there is a very good sprinkling of the following — Saj, Gorai, Palas, Dhoban, Rohan, Ghoti &c, &c
Garaghat Coupe, Garaghat Circle, Sonawani Range.	Crystalline rocks with laterite beds Soil red gravelly crust with sandy loam below, generally poor	Improvement fellings — Acres 40, 20 — Fellings of 1893 94, 1894-95 — Average number of shoots per stool 7, 7 — Average height (feet) 5½, 3½ — Average girth (inches) 2½, 1½ The self-sown seedlings in this coupe were not counted, but there is a very good sprinkling of seedlings of the following kinds — Garari, Palas, Lendia, Khair, Dhaura, Saj, Tendu, Amaltas, Bhillawa, Aula.

Appendix C.—(Contd.)

Division.	Name of Coupe, Circle and Range.	Underlying rock and soil.	Particulars.	Remarks.
Balaghat.—(*Concld.*)	Bichwa Coupe, Bichwa Circle, Sonawani Range.	Trap and limestone. Soil, rich black, intermixed with sandy loam of good depth.	Improvement fellings :— Acres. 90, 56 — Fellings of 1893-94, 1894-95 — Average number of shoots per stool. 7, 7 — Average height (feet). 6½, 3 — Average girth (inches). 3, 2 The self-sown seedlings in this coupe were not counted, but there is a good sprinkling of the following kinds :— Aula. Bhira. Saj. Rohan. Garari. Dhaura. Khair. Palas. Salai.	
	Jamunia Coupe, Sonawani Range.	Crystalline rocks. Soil sandy poor, of little depth and stony.	Improvement fellings :— Acres. 69, 40 — Fellings of 1893-94, 1894-95 — Average number of shoots per stool. 5, 6 — Average height (feet). 5½, 3½ — Average girth (inches). 2½, 1½ There is a very good sprinkling of self-sown seedlings of the following kinds in this coupe :— Garari. Mowai. Palas. Salai. Tinsa. Saj. Rohan.	
	Kermara Coupe, Sonawani Range.	Crystalline rocks with quartz about. Soil sandy and poor, very stony, and ground broken up by ravines.	Improvement fellings :— Acres. 63, 48 — Fellings of 1893-94, 1894-95 — Average number of shoots per stool. 6, 5 — Average height (feet). 5½, 3½ — Average girth (inches). 2, 1½ There is a good sprinkling of self-sown seedlings of the following kinds :— Bahera. Garari. Kurro. Tondri. Saj. Salai. Mowai.	
	Agarwara Coupe, Sonani Range.	Crystalline rock. Soil poor, stony, sandy, of no depth.	Improvement fellings :— Acres. 100, 43 — Fellings of 1893-94, 1894-95 — Average number of shoots per stool. 6, 6 — Average height (feet). 6, 4 — Average girth (inches). 2½, 1½ There is a very good sprinkling of the following kinds of self-sown seedlings :— Saj, Garari, Salai, Mowai and Dhaura.	

	Chacheri Reserve, Paraswara Range.	Chiefly gneiss and sandstone. Soil chiefly alluvian; deep accumulation of good soil chiefly clayey, with an admixture of calcarious grit. Limestone nodules on surface and below.	Teak is rapidly increasing in this reserve in all low sheltered localities affording favourable seed beds. The ground in the vicinity of seed-bearing trees is well covered with seedlings and saplings representing all ages. Pure Teak now occupies 17·04 per cent. of the total area of the reserve and nearly 7 per cent. mixed with other species.
Bhandara ...	.....	The underlying rock is crystalline, and metamorphic laterite beds are plentiful throughout the district.	In the Gaikhuri Reserve natural reproduction appears to be, as a rule, unsatisfactory. It is doubtful if this forest has benefited in any way by eight years of fire-protection. Fire-protection unaccompanied by closure to grazing cannot do much good to any forest. The only tracts in this reserve where seedlings and saplings are met with are sides of ravines and localities where cattle cannot approach. The best results of fire-protection are seen in some parts of the Dudhara Reserve, where the reproduction both from stools and seeds is fairly good. Here gaps and glades are filling up rapidly, and the crop over a large area is very dense. In the areas not specially protected from fire, natural reproduction is met with in places not heavily grazed over, and where other conditions, such as soil, moisture, and shade prevail. With regard to the area cut over in the previous year, vigorous coppice shoots have sprung up and some of the shoots have already grown nearly 10 feet in height.
Bilaspur ...	*Nil.*	*Nil.*	*Nil.*
Chanda ...	.....	Metamorphic (gneiss and granite); soil a good loam.	In the Bhimaram Block of the Ahiri Reserve, plain portion, the regeneration of Teak is excellent and is accompanied by a good mixture of Saj, Garari, Dhaura, Shisham, Kair, Bija, Dhamin and Tendu, &c. The excellence of the natural regeneration seems to be in direct proportion to the amount the forest has been worked, the wounding of the soil by the timber cutting and extracting operations doing immense good in opening up suitable seed beds. Teak outgrows all other species, and in many places it is to be feared that unless other species are favoured the forest will tend to become more and more pure teak. To prevent this special favour should be shown to Tinsa and Garari, which seem to be such good shade bearers. On the hill portion of Bhimaram the surface soil is much less and the regeneration is on the whole poor; in a great many places this is due to the abundance of bamboo, which is such a great obstacle to regeneration when it occurs in any quantity. A greater portion of bamboo still is found in the Merkullu Block, and until the difficulty of getting rid of some of it in a cheap manner is solved, there will not be much regeneration. In the new Rumnah reproduction is progressing and is overcoming the grass in many place; but a good deal of this block is composed of open forests of the ordinary Central Provinces type, with very much grass. In these latter parts regeneration is slow, and it will be many years before there is a good show of young growth.

Appendix C.—(Contd.)

Division.	Name of Coupe, Circle and Range	Underlying rock and soil.	Particulars.	Remarks
Chanda.—(*Concld.*)	Haveli Forests ...	Soil derived from Kamthi sandstone and alluvial deposits.	The reproduction of Saj (*Terminalia tomentosa*), Teak (*Tectona grandis*) in Chowki and Asegaon compartments, Bija (*Pterocarpus marsupium*), Bahera (*Swietenia chloroxylon*) and Garari (*Lebidieropsis orbicularis*) is very noticeable in forests protected from fire and partly from grazing. In tracts not protected from fire the reproduction of Saj is fairly abundant. The stool shoots in Himathpur are much trampled down by the cattle which graze there. In other places they are doing fairly well.	Notes by Mr. Ganga Parshad, Forest Ranger.
			No natural reproduction was seen in Erur. Bamboos are in abundance and are a great nuisance to the progress of seedlings.	
	Dhaba ...	.....	Natural reproduction of Teak, Saj, Lendia. Kusam is good in the areas protected from fire and grazing and where the bamboos are few.	
			In the unprotected area of Pipri, Teak reproduction is abundant.	
			Bamboos seem to do a lot of harm by suppressing Bija and other seedlings and ultimately killing them.	
	Warora Forests ...	.....	The stool shoots on the areas worked Departmentally are very good and promising. On the areas in which cuttings were made by purchasers the stool shoots are not very good.	
			Natural reproduction of mixed species is very good on Mohgaon Hill. There are no bamboos in this range to suppress the seedlings.	
			Seedlings of Garari and Ein are in abundance in the forests near Mesha, and to the north-west of it.	
	Moharli Forests ...	.....	Reproduction of most species is generally good. Teak in the south-eastern part of the Pipalkot Block is particularly noticeable, and it is fairly good in parts of the Turpati, Goverdhan and Toroba Blocks. Ein seedlings are found almost throughout these forests in patches, especially over stretches of moist black-cotton soil. The reproduction of Bahera is marked on the high exposed plateau in the Toroba Block or with Rohan over red soil broken ground.	Notes by Mr. Hunt, Forest Ranger.
			The almost total absence of reproduction is marked under dense bamboo cover.	

Chhindwara ..	Khudbeli	...	.....	The natural reproduction is fairly good in this reserve, but is not found uniformly distributed over the whole area. Reproduction from seed is found principally and to a very fair extent in the valleys and on the gentle slopes, generally of a south-east aspect, in the more central parts of the reserve, as, on account of the hilly nature of the area, scarcely any grass is removed from these parts nor are they grazed over. And as the whole of the reserve is under special fire-protection, most of the conditions essential to natural regeneration are here more or less found, and there is every reason to expect that in a few years the natural reproduction in this reserve will be most satisfactory. Reproduction from stools is generally very satisfactory, and is to be found wherever any cuttings have been made. Lendia and Saj are specially noticeable for the number of shoots they throw up.
	Jatikhapa	...	.....	In this block, which has been under special fire-protection and closed to grazing for several years, the reproduction from seed is not as good as might be expected. This is due to the generally poor quality of the soil. A moderate quantity of regeneration from seed is found along the river Parch and the east of the block.
	Kanhan	...	.....	The natural regeneration here is found in patches scattered about the interior of the reserve; this is due to the facts that the reserve is not as yet systematically protected from fire; that the grazing in it is very heavy, and that much damage is done to the seedlings and shoots during the removal of grass and other minor forest produce. In the Kanhan Valley seedling growth is fair, though it is desirable to have more natural regeneration and spread more evenly over the whole area of the reserve.
	Chhindeywani	...	.....	This block has a very fair quantity of natural regeneration, but principally from stools. The regeneration from seed is found towards the Pench River and the north-eastern portion of the block, and is well grown. The reproduction from stools is fairly abundant and is found in all stages varying from the young shoot to poles of from 1½ to 2½ feet girth, and in the majority of cases is well grown and healthy.
	Bankatawa	...	.....	In this block the regeneration from the bamboo seed is largely found, while seedlings of other species are more or less scarce; this is due, probably, to the large number of bamboos to be found here, and consequently to the inability of the seedlings of other species being able to get a good hold of the ground and sufficient height, while in parts the effects of forest are noticeable. It may here be noted that, as a whole, the reproduction from stools is fairly satisfactory.

Appendix C.—(Contd.)

Division.	Name of Coupe, Circle and Range.	Underlying rock and soil.	Particulars.	Remarks.
Nagpur-Wardha	East Pench, eastern half.	Mostly sandstones; soil shallow.	The reproduction from stools is good nearly everywhere; seedlings of Saj, Tinsa and Kher most noticeable and abundant in parts.	
	Do., western half along Pench River.	Soils derived from metamorphic crystalline rocks except in a few valleys. Soil is shallow.	Most of this area has been under special protection for many years: as a result reproduction from seed is excellent on the whole, and the blanks are fast filling up, chiefly with Tinsa, Lendia and Dhaura and Tendu.	
	West Pench Range ...	Mostly metamorphic rocks. Soil poor and shallow.	In all ravines and valleys, which have been for some years under special protection, reproduction from seed, including Teak, Saj, Tinsa, &c., is excellent; and blanks are filling up on the steep hillsides, and in the areas open for grazing there is very little except from stools.	
	Umrer Range ...	Trap soil ...	Reproduction is very unsatisfactory: the grazing in all these areas has been heavy.	
	Kondhali Range ...	Mostly trap; a small area is sandy soil; shallow everywhere.	Reproduction is chiefly from stools. Until this past year no area has been under protection from grazing. On some of the hillsides there is fair seedling growth of Teak and other trees, but not elsewhere.	
	Arvi Range ...	Trap rocks everywhere. Soil poor and shallow.	In portions of the specially protected areas of Erjhur and Borkheri growth of teak and other species is promising. The rest of this range has been so heavily grazed over and the soil is so hard and poor that very little seedling growth of the useful species can take place.	
Raipur ...	Bheja Sub-Range ...	Soil black mould or rich sandy loam underlying rock. Laterite or sandstone.	The natural reproduction from seed in the bits in the south and west of Bheja south of Petechua, south and north-east of Markatola, north and south of Karrajhar, and north and south of Naikura is very good.	
	Dargahan Sub-Range ...	Soil do. ...	The natural reproduction of the various forest species and specially of Saj and Garari between the Urpotinala and Silaria Nadi is very good. This refers to area in the fire-protected block of Maramsilli.	
	Banbagond Sub-Range ..	Soil rich sandy loam; underlying rock sandstone.	The natural reproduction, specially of valuable species Saj, Bija, Dhaura and Tinsa, &c, on the south and east of Kurmajhar, south and east of Dokal between Koterwahi and Magond, north of Kotarwahi and north and east of Pardhi is very good.	

	Mohdi Sub-Range ...	Soil sandy loam; underlying rock sandstone.	The reproduction of seeds round Birjholi, north of Kosumkhuta, north of Kecradh, Kosamkhuta road, north and east of Pendhri and Bakori and also north-east of Phuljhar, is very good. NOTE.—Reproduction from tools in all the coupes of this Range is very good.
	Balod Range, Sanjari Sub-Range.	Soil rich sandy loam; underlying rock sandstone.	The natural reproduction in the west of the Matewa, in east of Kowrootola, west of Tekapar, and south of Lamti, and between Matewa and Madwapathor is very good.
	Rajoli Sub-Range ...	Soil rich black mould or rich sandy loam; underlying rock standstone.	The reproduction from seed in the area between Petechua-Madiyakatta and Puchera is very good. The natural reproduction in the area called *Kulor is also very good. NOTE.—None of the above areas except those marked thus* are under fire-protection.
	Nahnda Sub-Range ...	Soil sandy loam; underlying rock generally laterrite.	The reproduction of Teak, especially from seed in the area between Sepod, Moola and Ghootia, is very good. NOTE.—Reproduction from stools in the cuttings of this range was satisfactory but not markedly good.
	Sirpur-Khallari Range, Khallari Sub-Range.	Soil rich black mould; underlying rock sandstone.	The reproduction of Saj in the Joratarai and Kasibahra are good.
	Tumgaon Sub-Range ...	Soil sandy loam; underlying rock sandstone.	The reproduction of various forest species in the area between Goochapati, Urar and Kohri is very good.
	Sirpur Sub-Range ...	The soil sandy loam; underlying rock sandstone.	The natural reproduction in the area between Phusera, Chapora and Lahangar is very good. Also beweent Ambore and Pasid it is very good. This refers to area in the fire-protected block of Sirpur. NOTE.—Reproduction from stools in the Tamora coupe is very good. In the other coupes fair, except in the Pasid coupe, where it was injured by the flood waters of the adjacent nala.
	Lown Range ...	Soil sandy loam; underlying rock sandstone.	The reproduction from seed of the various species in the west of Dharaseo, south of Belpura, the whole of the Ghirghole Reserve and all round Hardi and Nawapara is very good. The reproduction of Sal especially in the various patches in the protected block of Kantra Nala and that of the Bamboo in the area between Jhalpan, Gooragarh and Hardi on the west, and the Bilaspur boundary on the east, is also very good. The above refers entirely to the fire-protected reserves of the Lown Range. NOTE.—Reproduction by stool shoots in the coupes of this range is fair.
Sambalpur ...	Kulchar Block ...	Soil derived from sandstone and gneiss.	This area has been fire-protected for four years, and the reproduction of Sal is very good nearly everywhere. In some spots a thicket of young saplings has sprung up. Grazing is permitted in this block.

Appendix C.—(Concld.)

Division.	Name of Coupe, Circle and Range.	Underlying rock and soil.	Particulars.	Remarks.
Sambalpur.—(Contd.)	Munder Block ...	Soil found as above from gneiss and sandstone.	Reproduction of bamboos is very good all over the hills. Sal seeds abundantly where it exists in the basins and valleys, but has not been able to do well for want of fire-protection. This year the area was fire-protected, and in May Forest Divisional Officer found the previous season's seedlings alive and thriving; 185 acres were coppiced in 1894. The stool shoots are doing very well and are coming up thickly over the area.	
	Grindola Khol Coupe of Barapahar Range.	Soil from gneiss and sandstone.	This coupe was felled early in the rains and a good crop of stool shoots has sprung up. Sal and Saj and Bijasal are well represented in this coupe. Sissu too is fairly abundant; Dhaura, Sena and Karla are numerous too.	
	Urdavo Bhadri Coupe ...	.....	In this coupe too Sal predominates, and the regeneration from stool shoots is progressing well. The young shoots are, however, eaten by spotted deer.	
	Raktikol and Gujadongri Coupes.	Soil from gneiss and sandstone.	Stool regeneration is good on the level ground where the soil is a free sandy loam. Sal and Saj predominate in the crop.	
Seoni ...	Korai Range ...	Soil derived from gneiss rocks of metamorphic and plutonic series. In north laterite overlies these rocks.	Reproduction is very good in the portions closed to grazing and protected from fire. The blanks are becoming filled with seedlings of Teak (*Tectona grandis*), Saj (*Terminalia tomentosa*), and Tinsa (*Ougeinia dalbergioides*). In the parts where grazing has been allowed for years the reproduction is practically *nil*, although some portions are fire-protected. Reproduction from stools on 1894-95 coupes is also good, but more especially on the soil derived from gneiss rocks. On an average 75 per cent. of stools have coppiced and the average height of shoots is two feet. In the case of Palas (*Butea frondosa*) the highest shoots are some eight feet in height. In the 1893-94 coupes the average height of the shoots is about four feet.	
	Gangayenala ...	Do. ...	The same remarks apply to this range, except that the reproduction is not so good owing to the occurrence of fires in 1893-94 and 1894-95 in the fire-protected area. The reproduction from stools is also very good.	
	Oogly ...	Trap in parts overlying metamorphic and plutonic rocks.	Teak (*Tectona grandis*) is only found in parts and its reproduction is scanty. The regeneration of all other species is good, but with the exception of the Behreye Block, which is entirely closed to grazing, it is not likely to survive on account of grazing of cattle. Reproduction from stools is generally good. Saj (*Terminalia tomentosa*) did best, and then Aula (*Phyllanthus emblica*) and Tendu (*Diospyros melanoxylon*), but Dhaura (*Anogeissus latifolia*) and Lendia (*Lagerstræmia parviflora*) also have done well. The reproduction is best from	

		stools one to two feet in girth. The larger stools have practically no shoots, and the smaller ones very few; on an average 80 per cent. of stools coppiced, and average height of shoots is 1½ feet.
Chappara ...	Do.	The reproduction of all species is fair, with the exception of Saj (*Terminalia tomentosa*), which does not appear to have seeded freely. Lendia (*Lagerstræmia parviflora*) seeded badly also in the year under report. At present no portion of this range is closed to grazing, so that the reproduction will probably be nearly all destroyed, as has happened in former years. The regeneration from coppice is good, as in the other ranges, and calls for no special remarks.
Dhooma ...	Basaltic rock ...	In the blocks of Raichoor, Somnapur and Belkheri the reproduction of all species is good, that of Teak (*Tectona grandis*) in the two first named blocks being very noticeable.
.....	Some laterite ...	In the north of the Sherkunnir Block the soil is poor and reproduction is scarce, and the same may be said of the Sunaee Dongree forest. In the south of the Sherkunnair Block reproduction of all species is very good. In the Adegaon forests the regeneration of inferior (or "Satkuta") species is good, but Teak (*Tectona grandis*) and Saj (*Terminalia tomentosa*) have not done well. The copice reproduction is very good in the two coupes; 75 per cent. of the stools have coppiced and the average height of the shoots is one foot.
Nerbudda ...	Gneiss rocks in parts, elsewhere basalt and laterite.	Natural regeneration of teak (*Tectona grandis*), Saj (*Terminalia tomentosa*), and Khair (*Acacia catechu*) is good, but as no parts are closed to grazing the seedlings will probably not survive. The coppice reproduction is good, 70 per cent. of the stools having coppiced vigorously, chiefly of the following species:—Saj (*Terminalia Tomentosa*), Lendia (*Lagerstræmia parviflora*), Dhaura (*Anogeissus latifolia*), Tinsa (*Ougeinia dalbergioides*), Teak (*Tectona grandis*), and Aula (*Phyllanthus emblica*). The shoots average about one foot in height.

Appendix D.

FOREST DEPARTMENT, SOUTHERN CIRCLE, CENTRAL PROVINCES.

Statement showing the results of Departmental Cuttings in the Southern Circle, Central Provinces, during 1894-95.

Name of Range or Working-Circle	Name of Forests worked.	Area cut in acres.	Description of produce obtained in cutting.	Balance of stock on hand on the 1st July 1894	Cut and collected during the year, cubic feet (solid).	Number sold	Value realized.	Expenditure incurred in cutting	Balance of stock on hand on the 1st July 1895.	Remarks.
